Academic Works

01

Modular City

Turn autonomous vehicles into mobile multi-function modules

02

Landfill Revitalization

Promote balance development through Yonghe Landfill renovation.

03

Urban Village Reborn

Industrial revitalization of a dying village —— Beijing Houqi Village.

04

Boost Vitality at Night

Deal with the embarrassing situation of Shanghai People's Park at night.

Professional Works

05

Projects During Graduate School

01

modular city

Flexible modular autonomous vehicles with various functions in the future city

Imagine reorganizing open Spaces in the context of Autonomous Vehicles

Urban Design and Landscape Architectural design
Group work with Huang Fan
Location:Guo Mao CBD District,Beijing
Time:2020.07-2020.10
Instructor: Ding Yufei

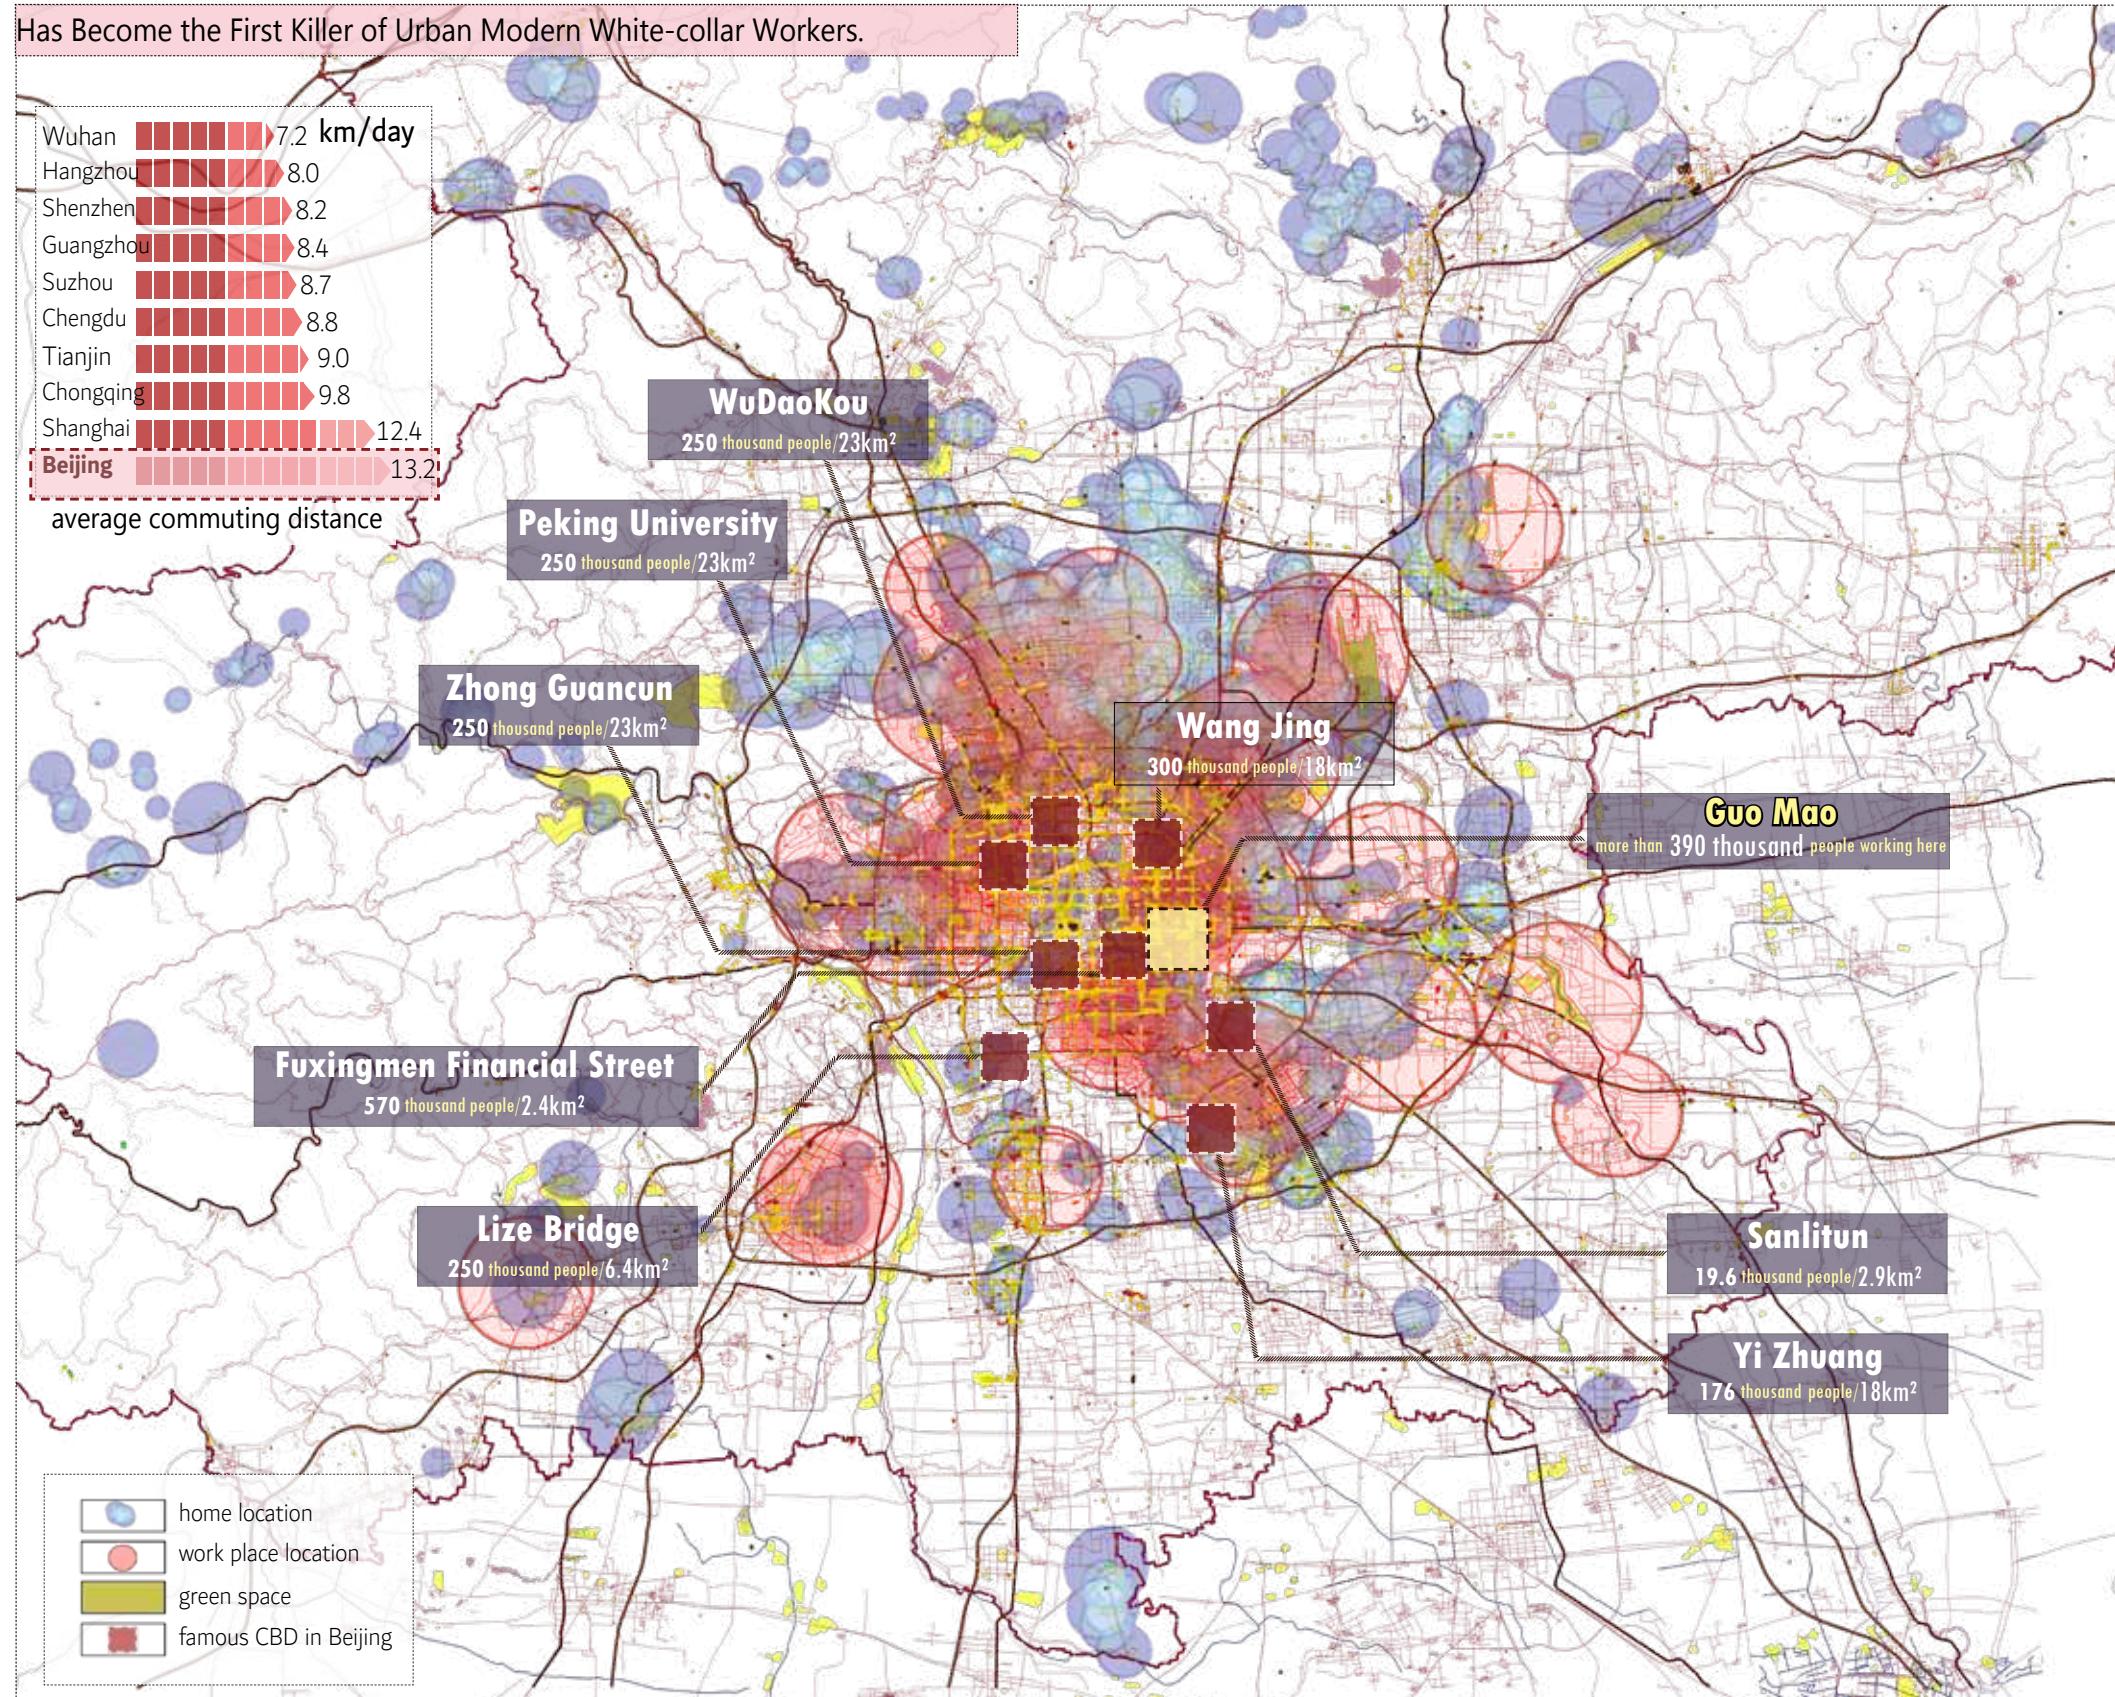

Contribution: 80%
design concept,mapping,site analysis,strategy,detail design,modeling

Contemporary urban white-collar workers, represented by young people living in first-tier cities, are facing great pressure. With the development of technology, the research related to Autonomous Vehicles is constantly progressing. The spread of Autonomous Vehicles is just around the corner.

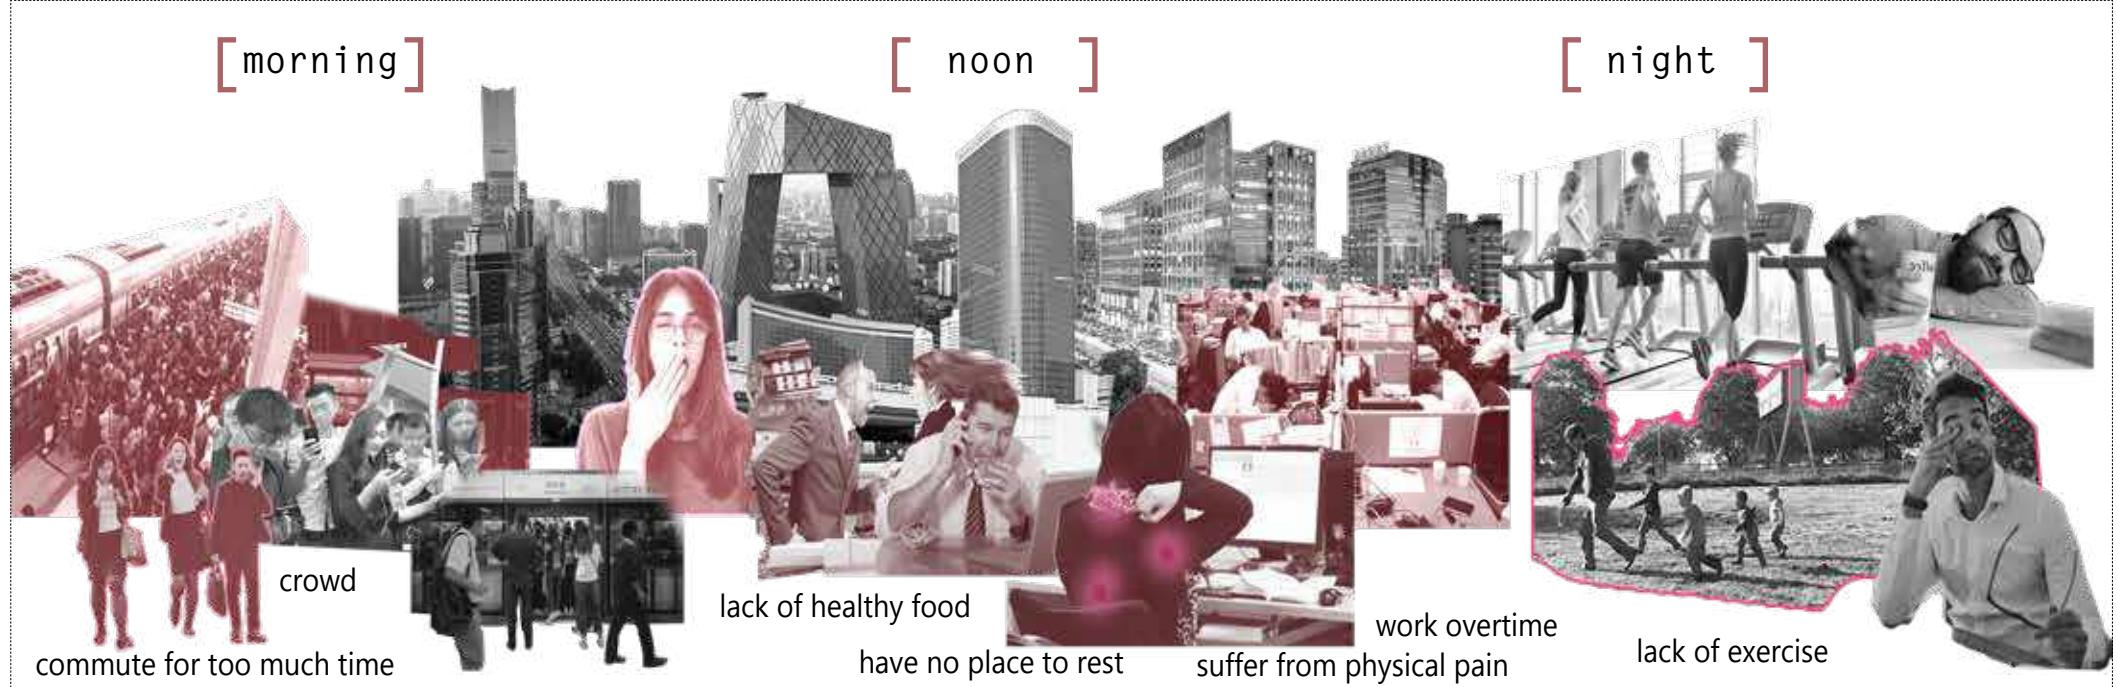

So we wondered if it would be possible to apply urban design into the context of Autonomous Vehicles spread, which may help alleviate the widespread stress and improve the quality of life of people in big cities.

Mental Stress...

Has Become the First Killer of Urban Modern White-collar Workers.

The Source of Stress

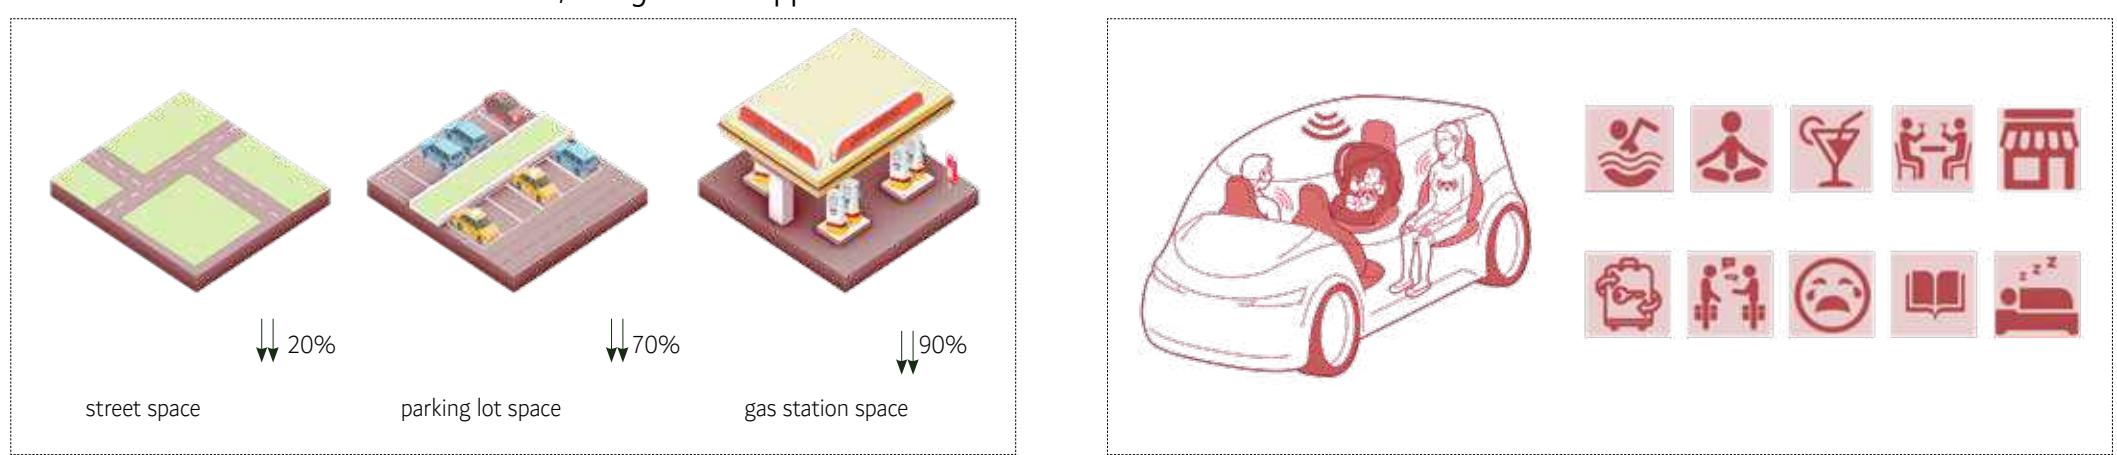

Problems

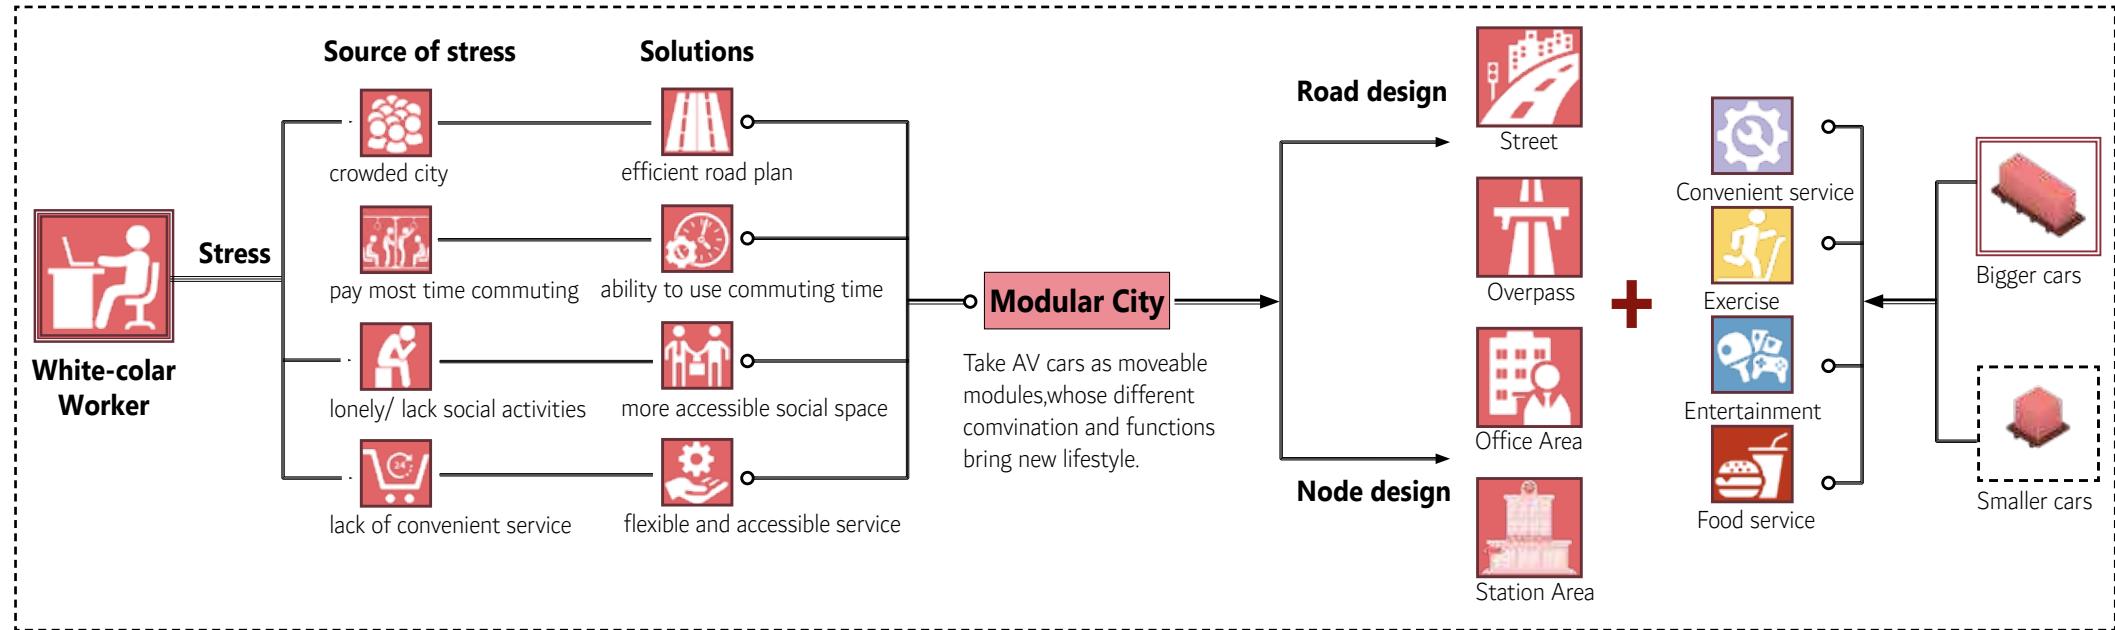

Potentials

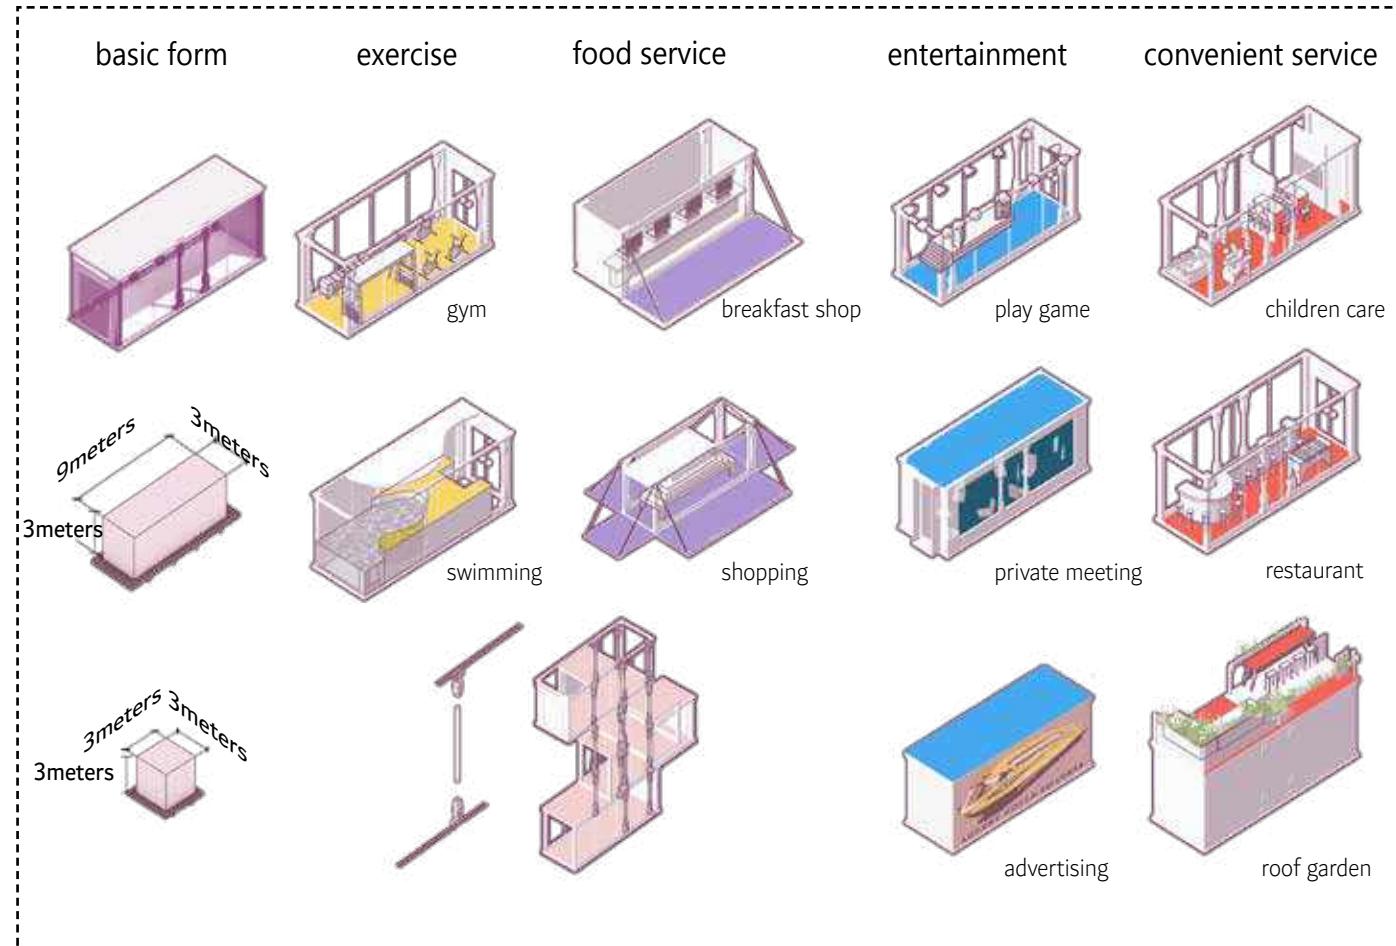

With the Presence of Autonomous Vehicles, Changes Will Happen

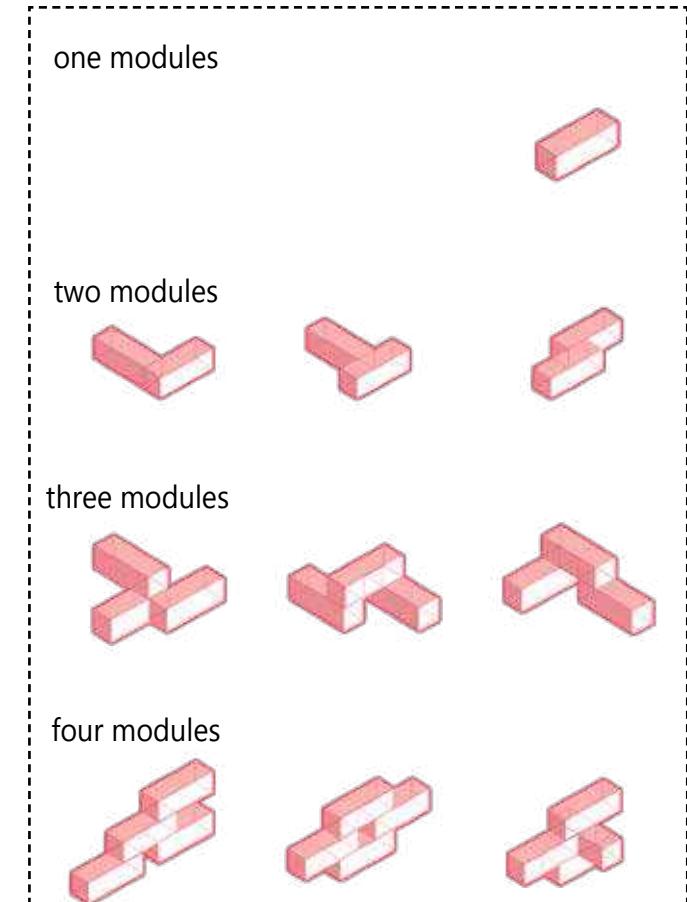

Framework

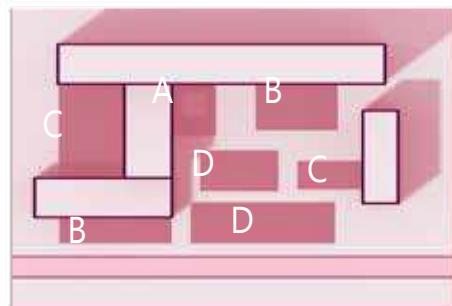

Detailed Design of Module AV Cars

Aggregations of AV Cars

The Combination of Modules and Green Space

According to the openness and accessibility of space that buildings and streets can enclose, we divide the space into four categories.

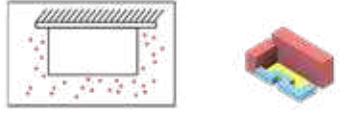

We place the modules along open boundary, the green spaces will change accordingly

Small scale
10× (5-20) m **Medium scale**
20× (10-20) m **Large scale**
30× (15-40) m

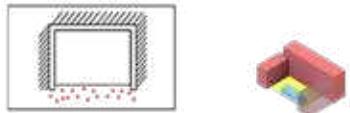

A Restricted in one directions

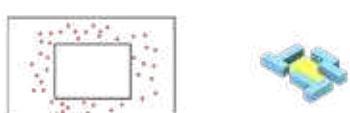

B In the corner of the building

C Open and free in three directions

D No restriction

Different Functional Spaces

Food service

Entertainment

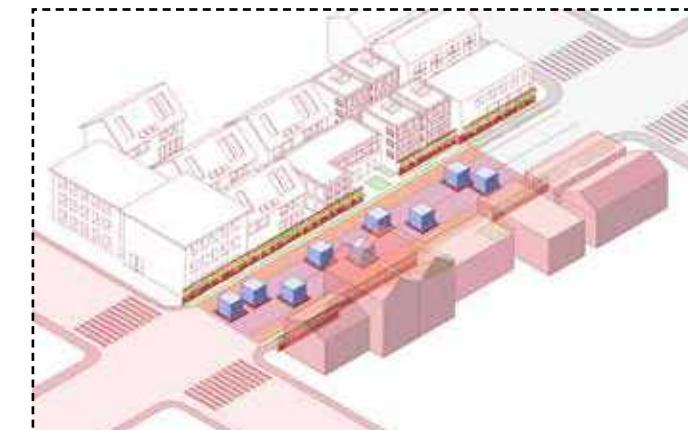

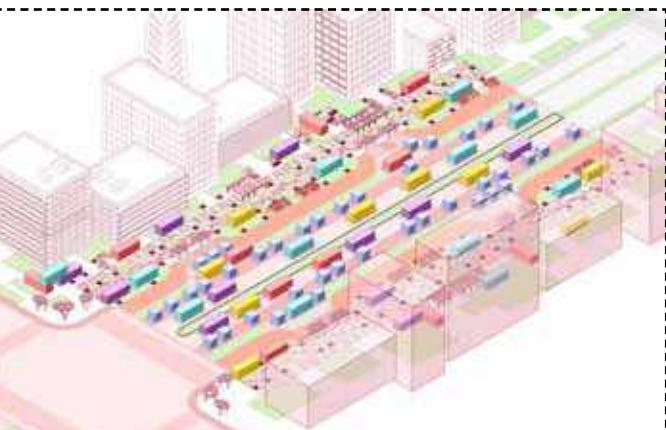

Exercise

Convenient service

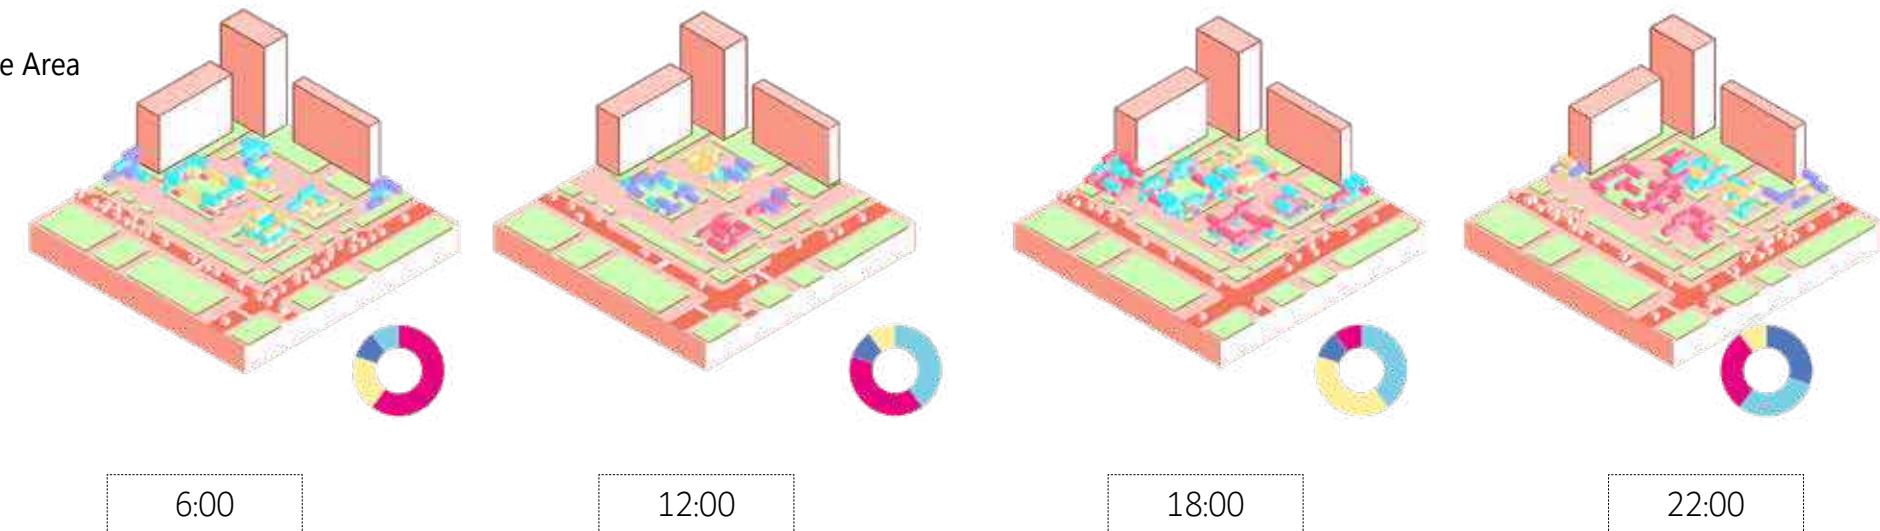

Street Design - Divide Into Three Level

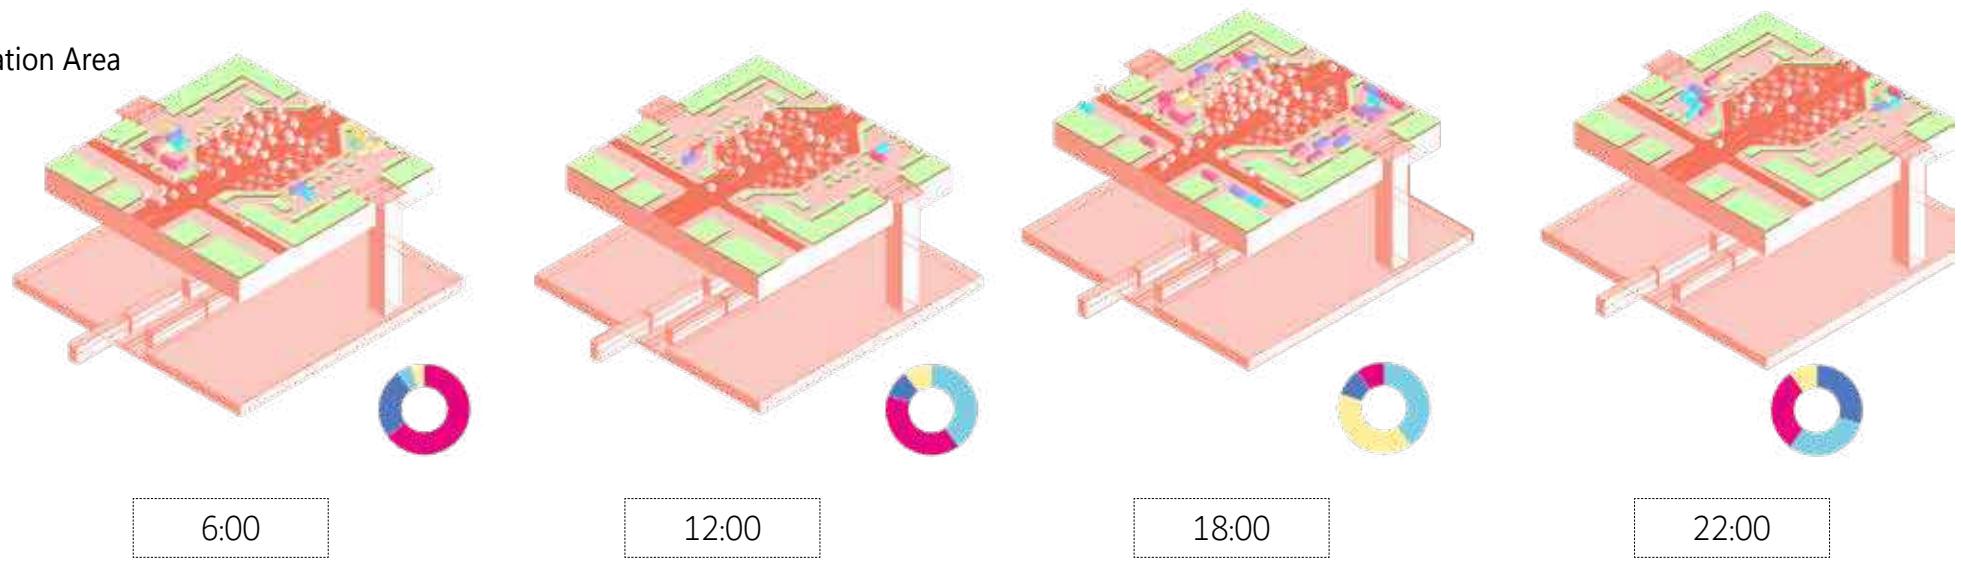

Node Design

Module arrangement changes with time

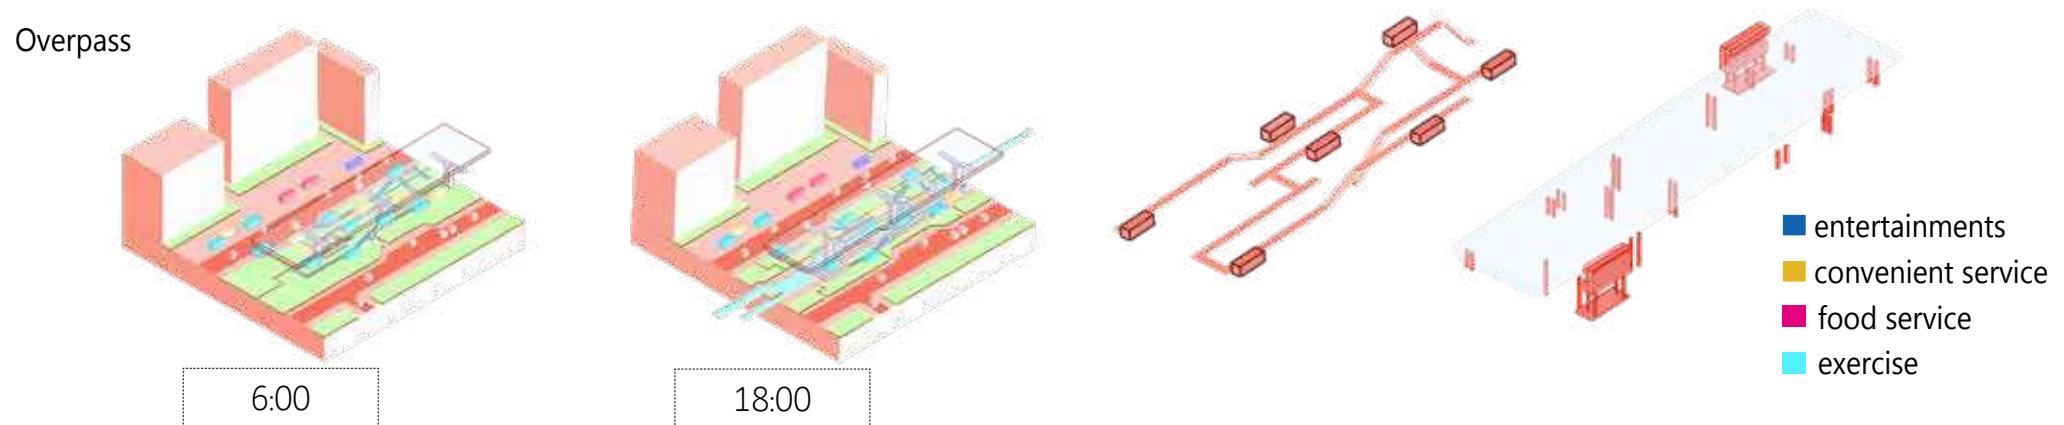

Office Area

Station Area

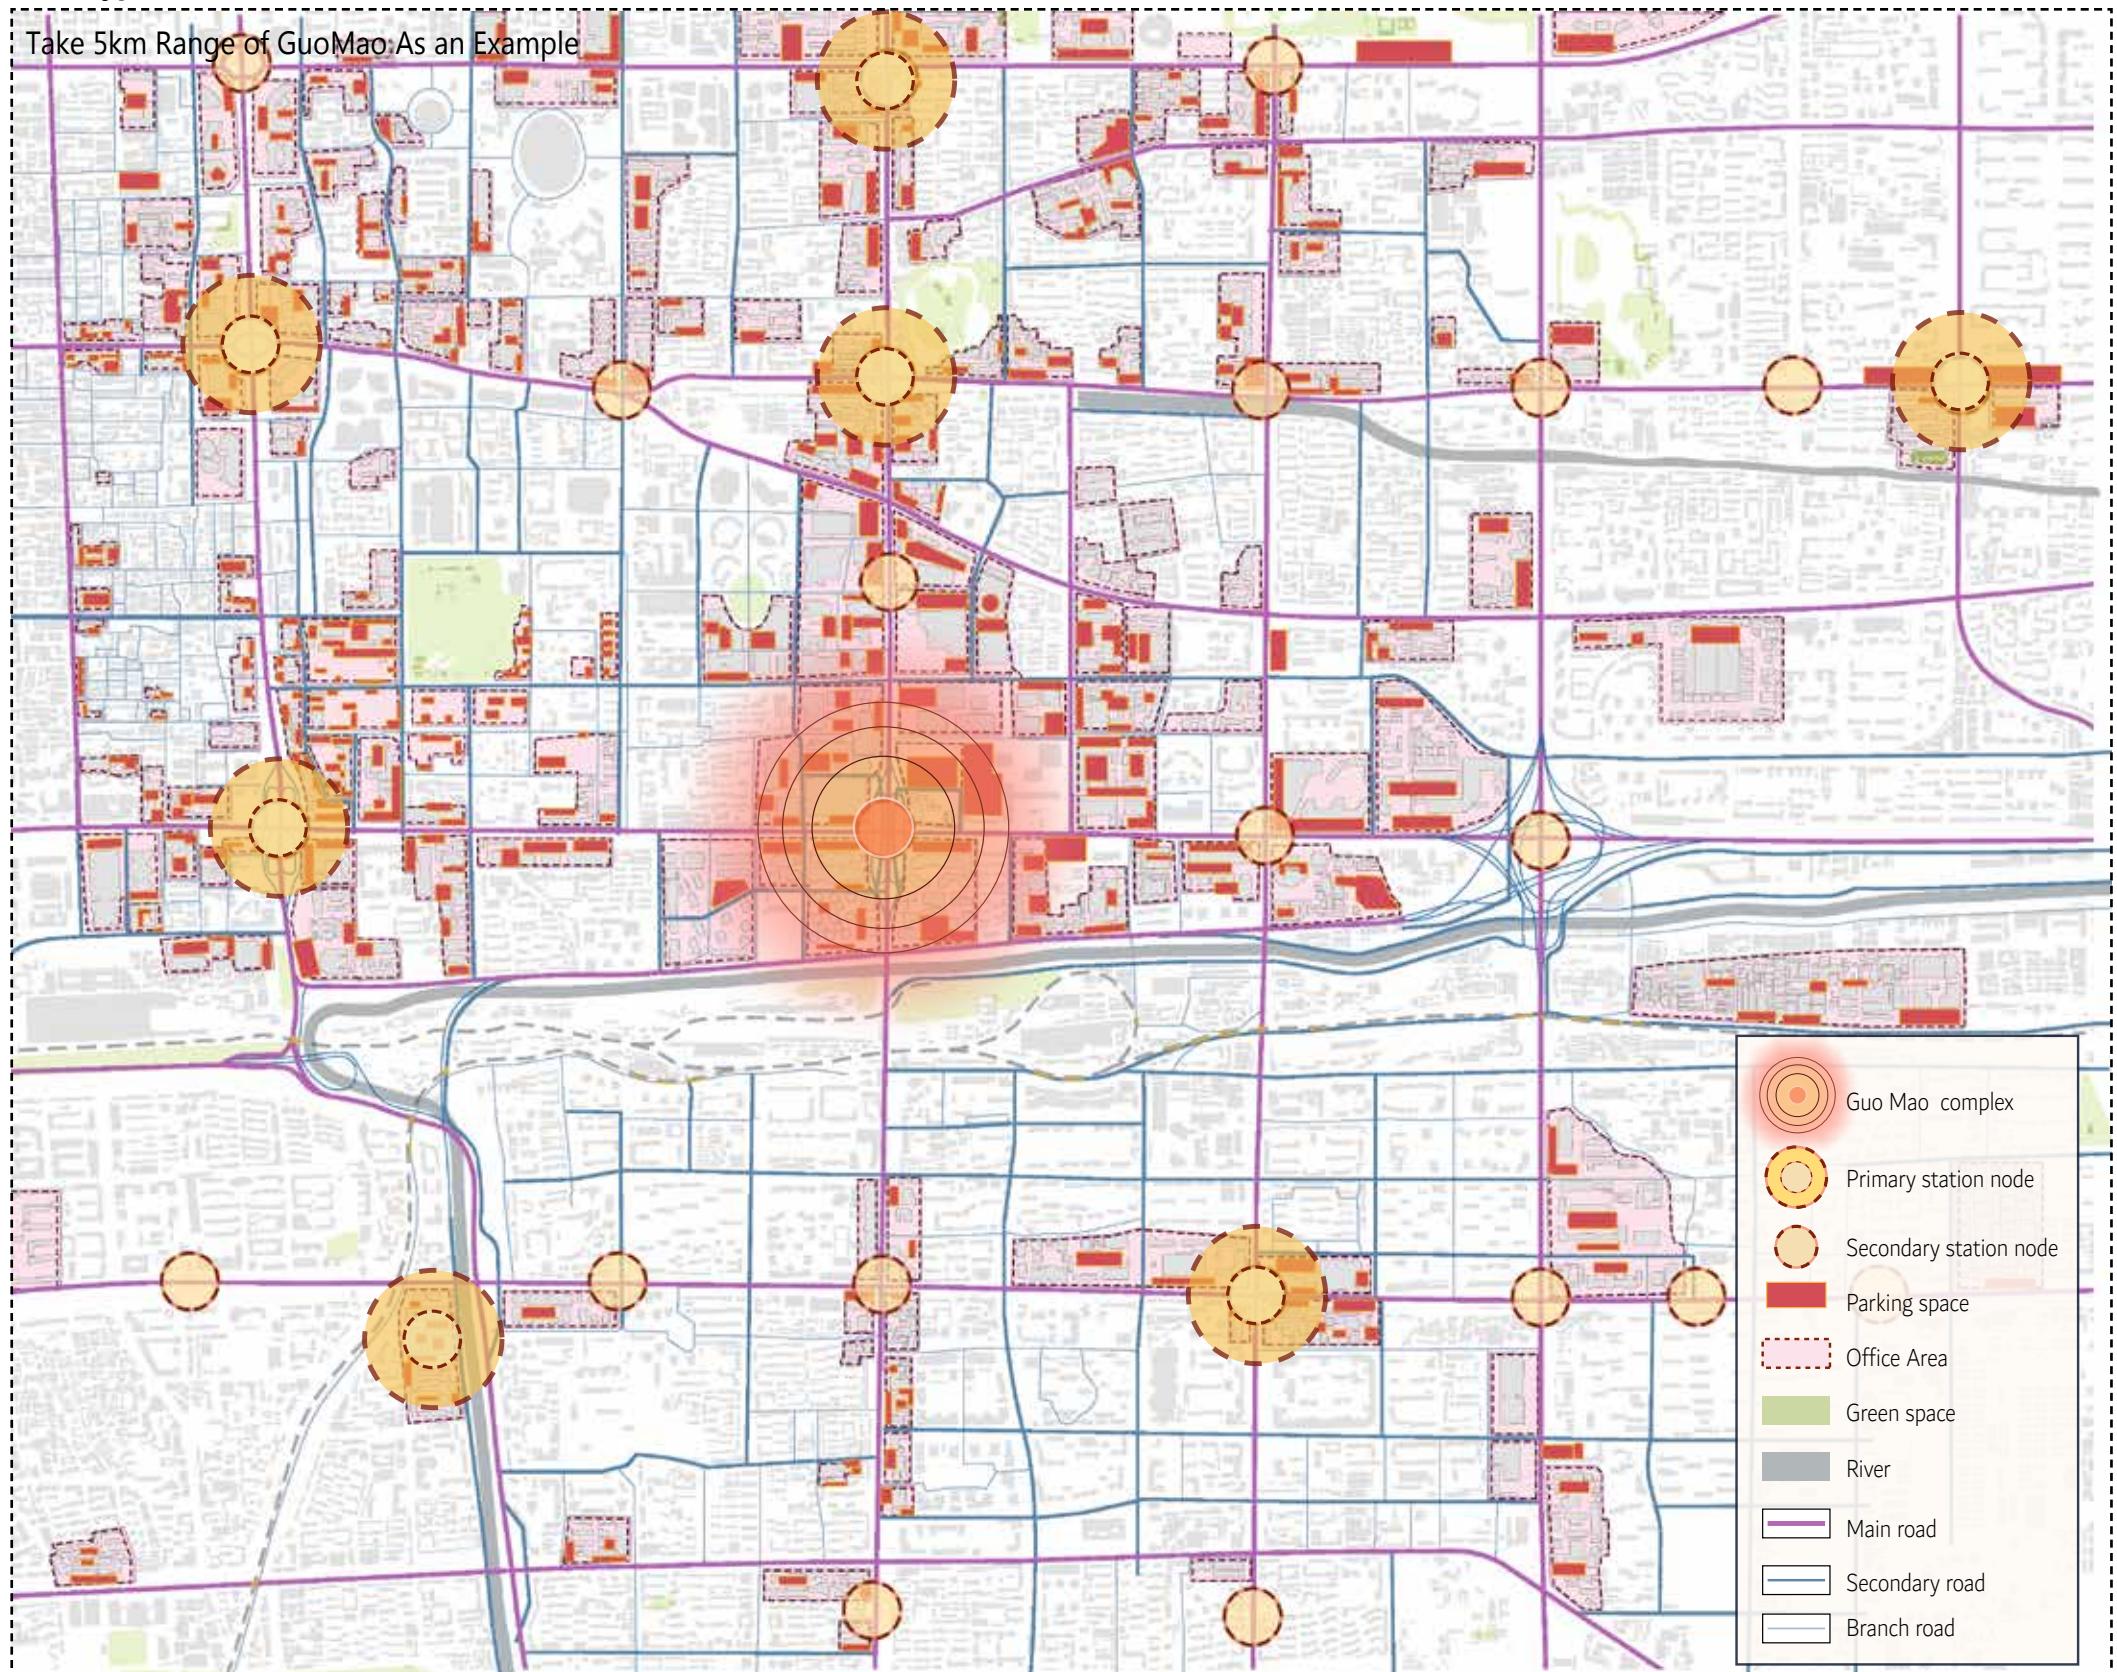

Overpass

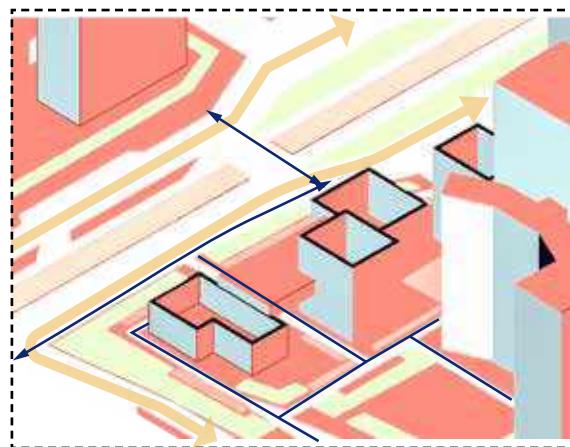

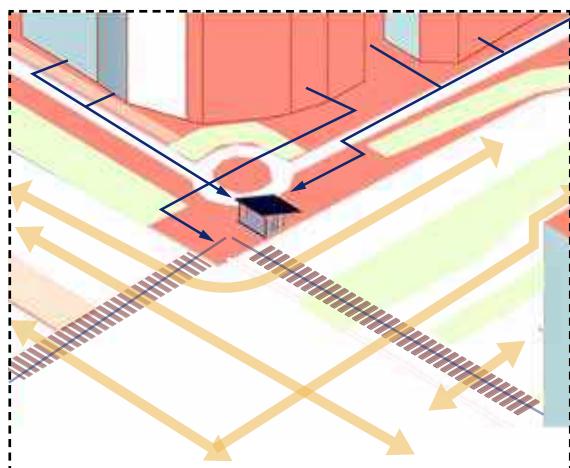

Prototype

Take 5km Range of GuoMao As an Example

Traffic Flow Analysis

Axonometric Drawing of the Site

Space Before Office Area

Before the office buildings, use healthy walkway connect open spaces along the street. Stack modules there and people can reserve the function they choose in advance through phones.

Space Under the Overpass

Make use of the space under the overpass. Hang modules on it with the metal structures. People can walk through the handrail. Use ground space as temporary parking lot.

02

Landfill revitalization

Research on the restoration of Beijing municipal Landfill
take Yonghezhuang landfill as an example

Redesign the landfill to promote the balanced development of the community

Urban Design and Landscape Architectural design

Group work

Location:Yonghezhuang landfill District,Beijing

Time:2017.07-2019.03

Instructor: Li liang

Contribution: 80%

project leader,mapping,research,problems,strategy

Beijing, the capital of China, is an international metropolis with ancient and modern cultures. There are neat clean streets and rich entertainment life. Fast pace life take over People's daily life, However, behind the city's high-speed operation, landfills and incinerators scatter around the city, working day and night, quietly bearing the waste produced daily by its densely populated population.

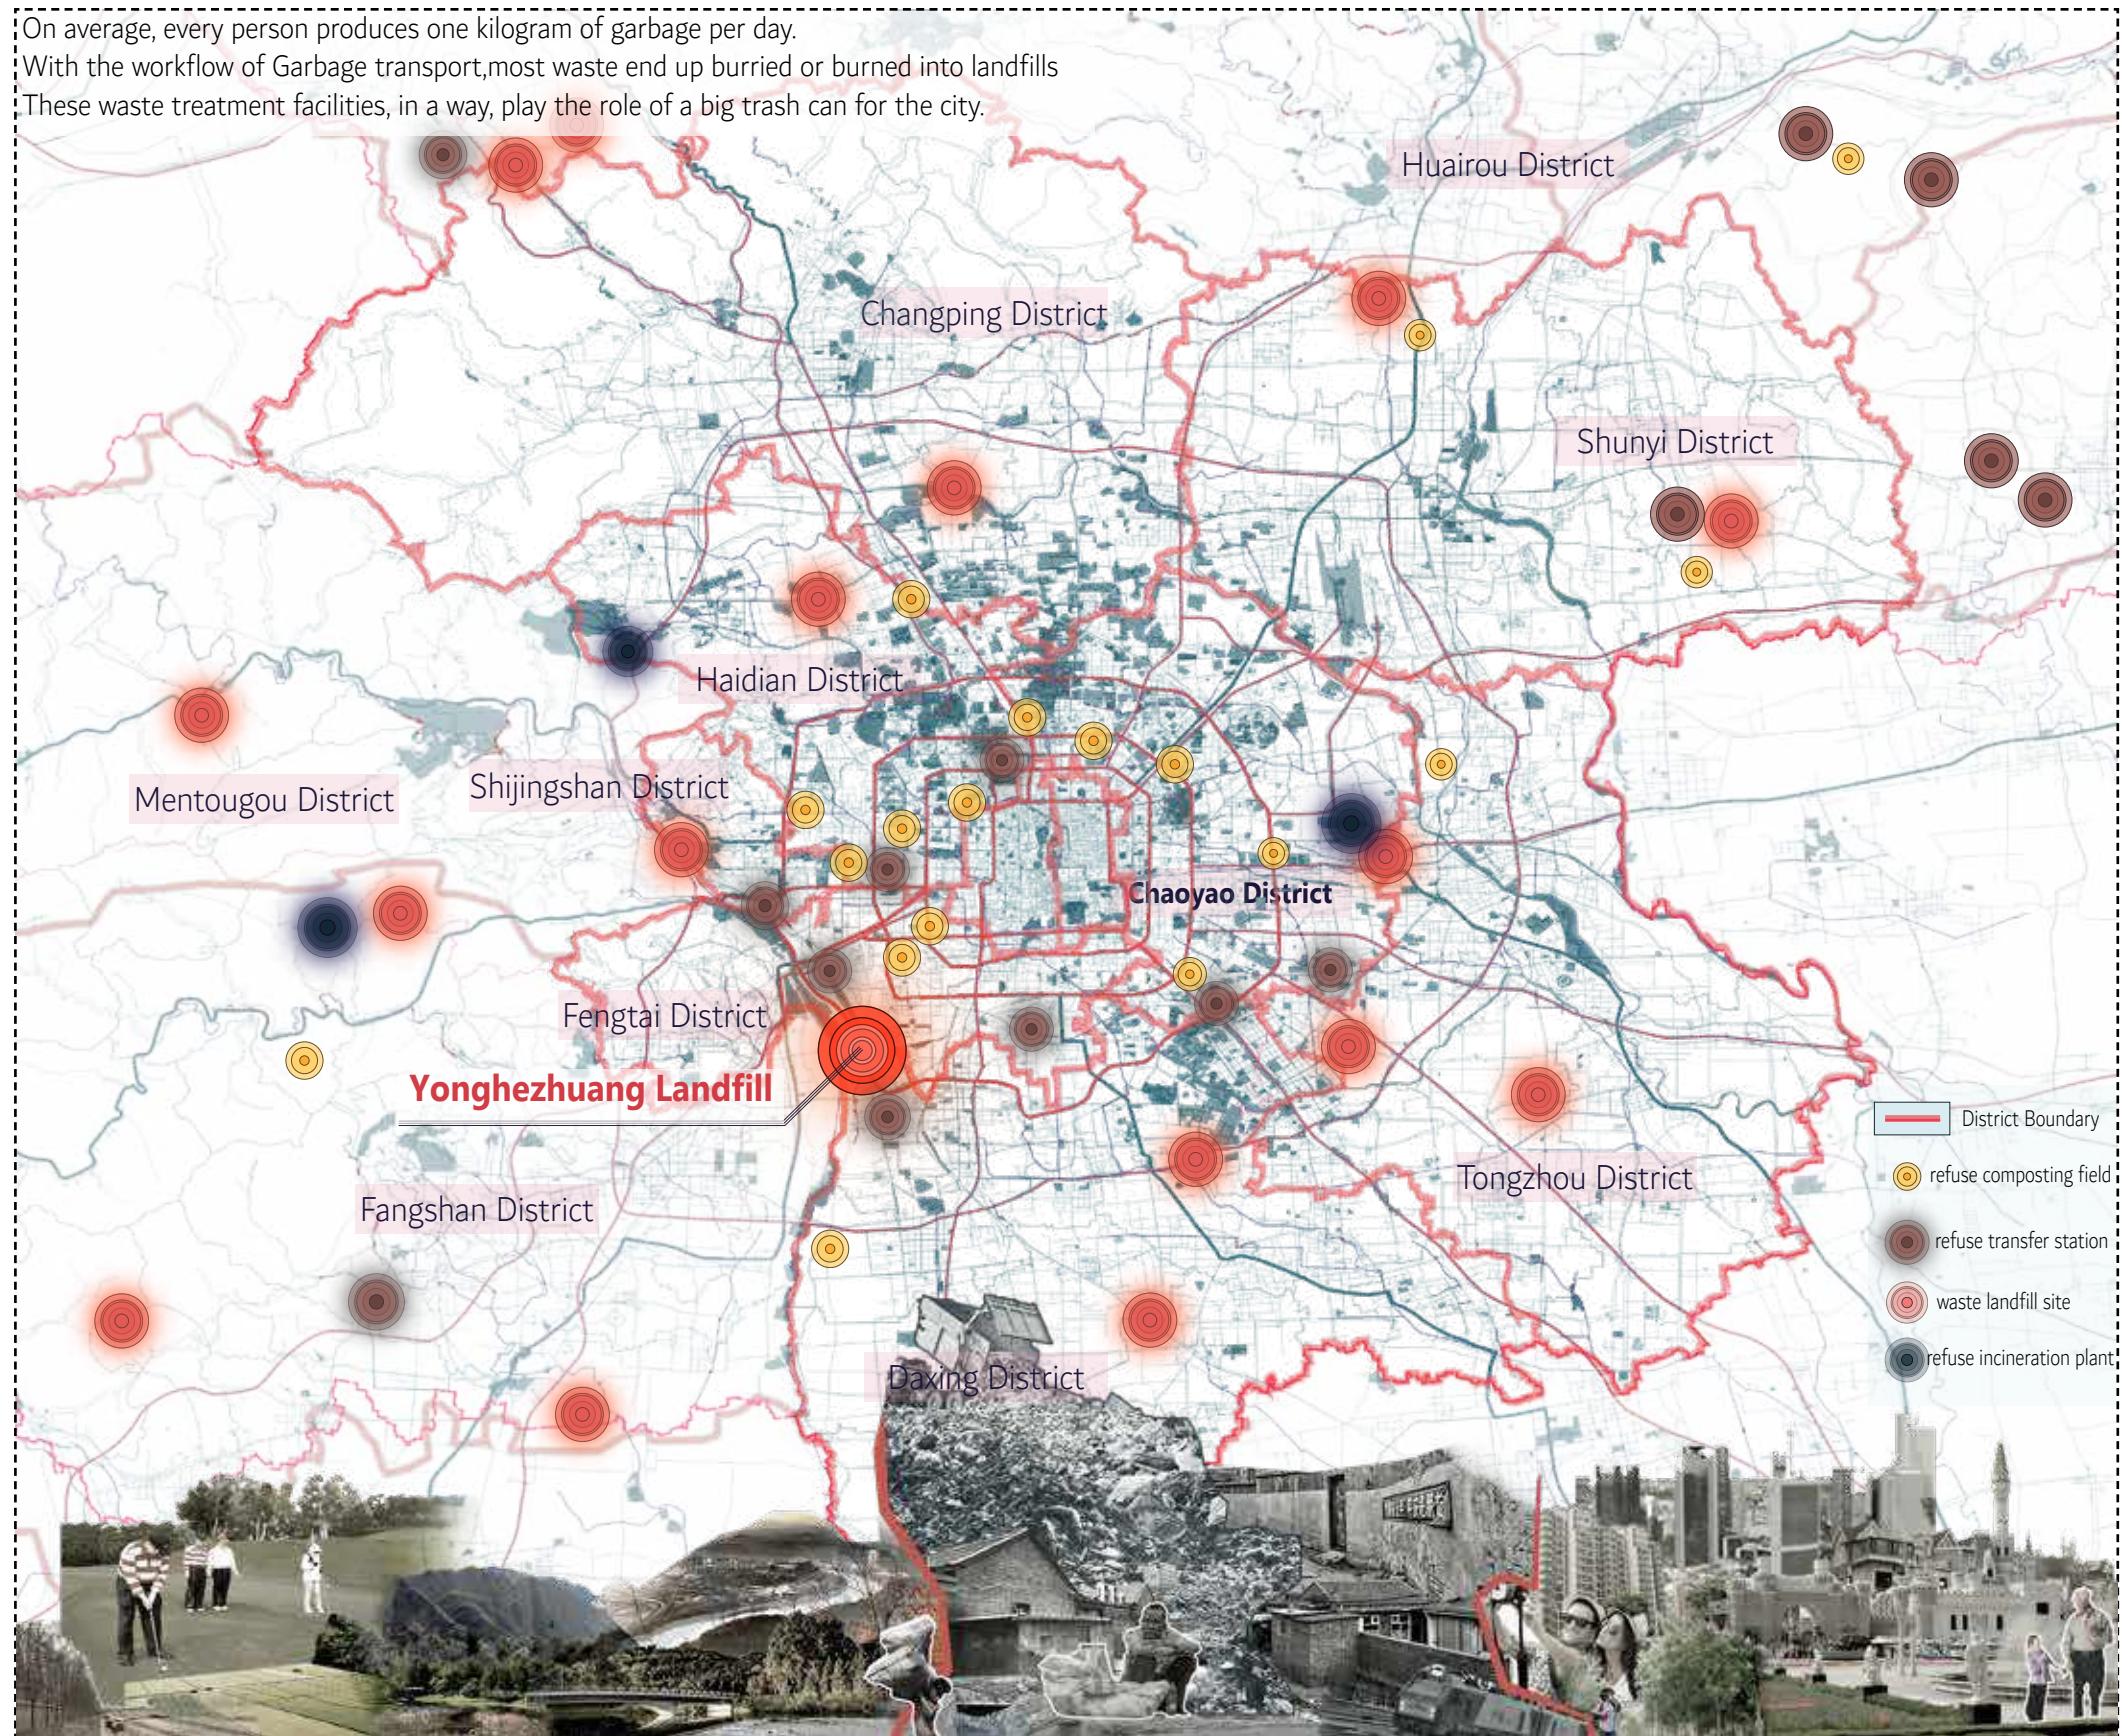

Nowadays, there are 37 domestic garbage treatment facilities in Beijing, with a daily treatment capacity of 22,000 tons. These land acts as the city's garbage can and are roughly closed when they reach the limit of affordability. But at the same time, its impact on ecology, cities and society is continuously going on...

Mapping of Waste Treatment Facilities

On average, every person produces one kilogram of garbage per day.

With the workflow of Garbage transport, most waste end up buried or burned into landfills

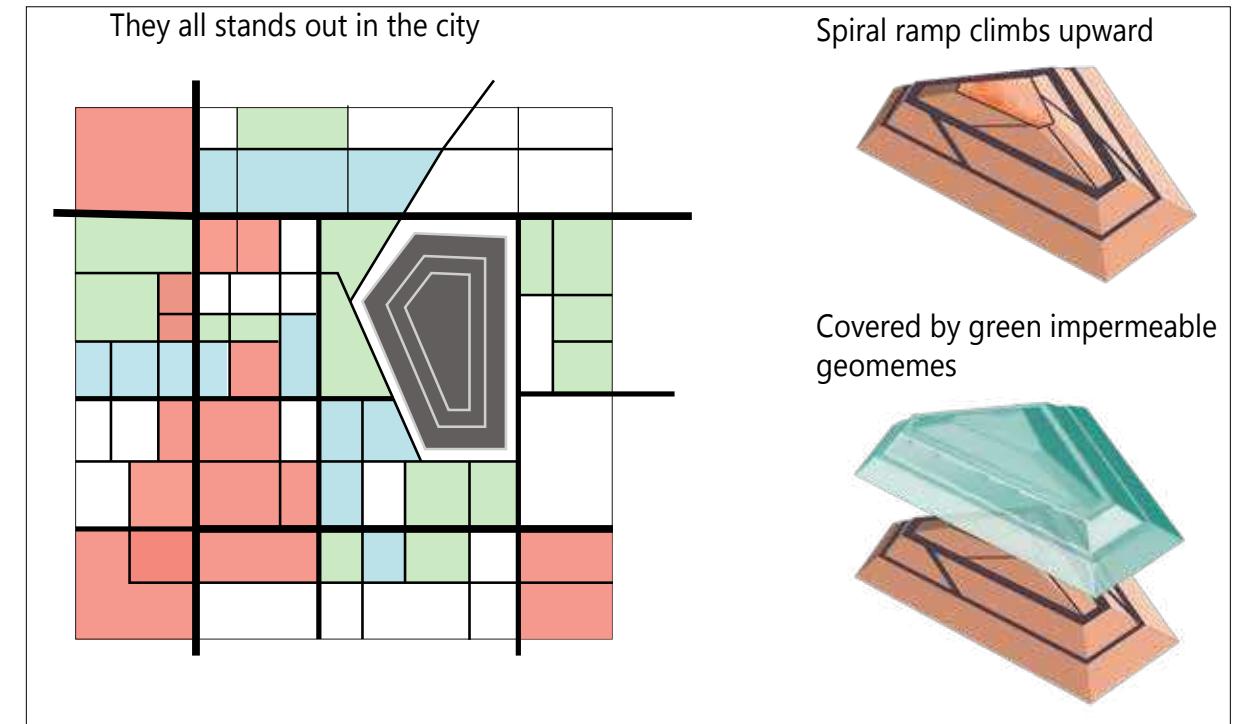

These waste treatment facilities, in a way, play the role of a big trash can for the city.

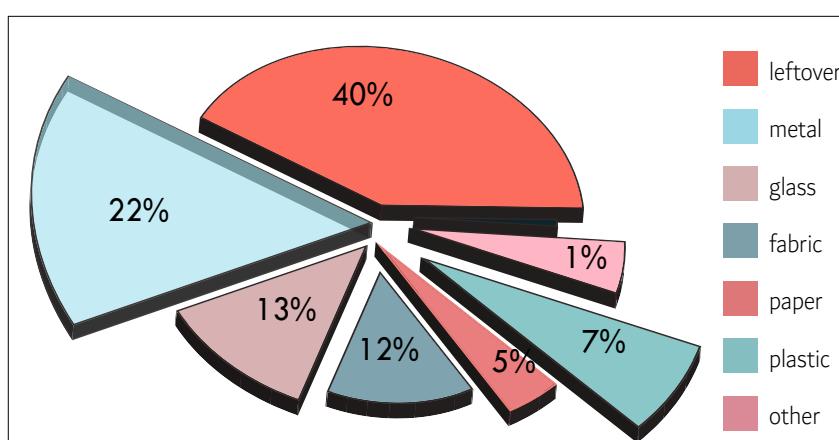

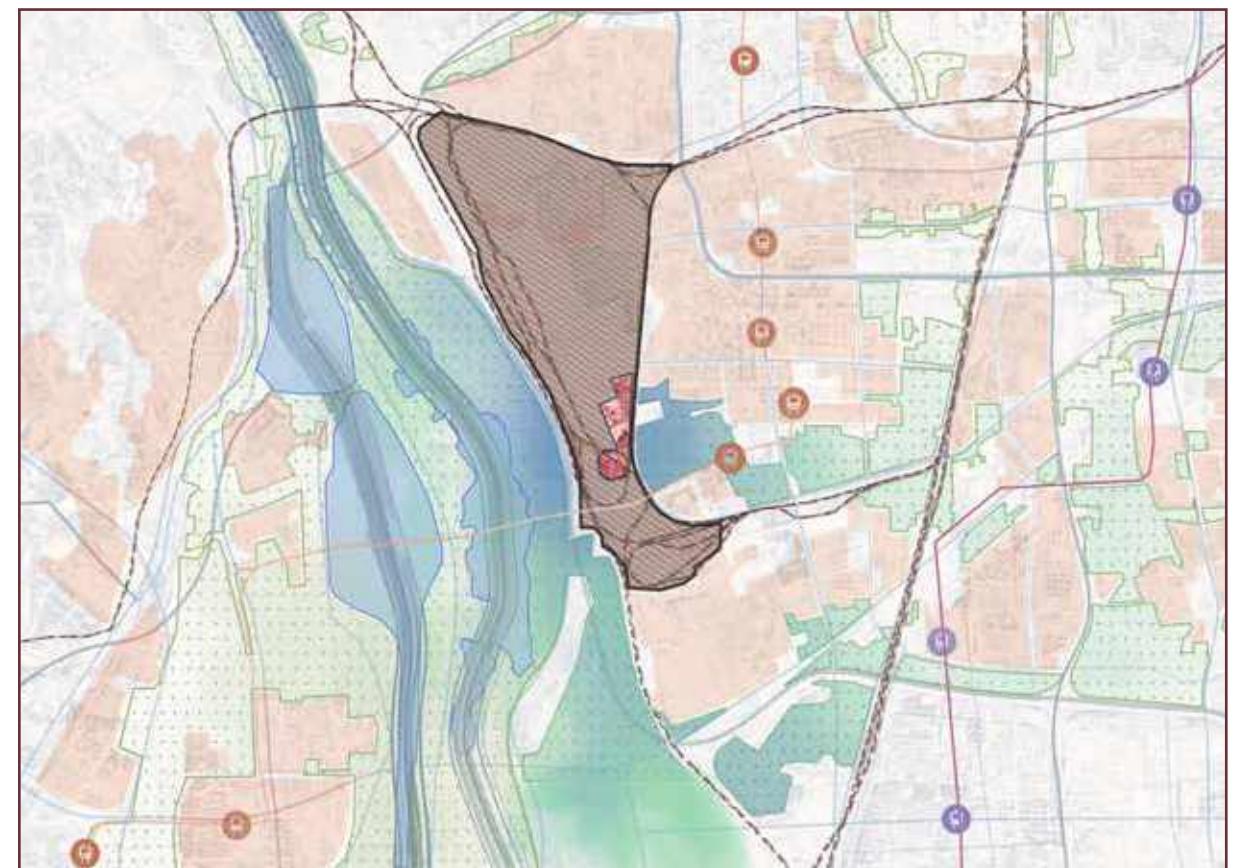

Field investigation records

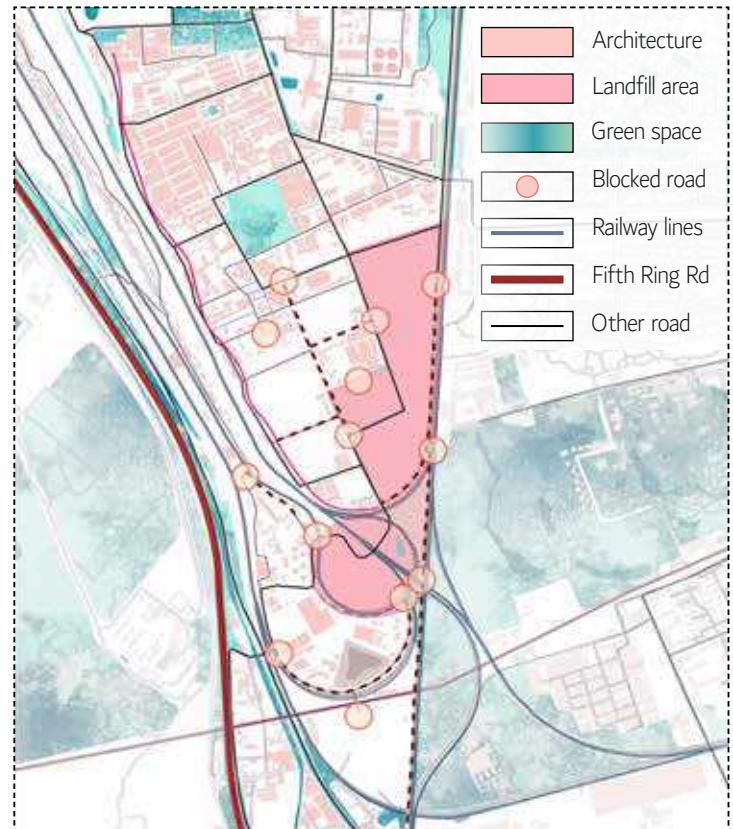

Common Grounds in Those Landfills

Surrounding Environment Analysis - 5.0 KM Scale

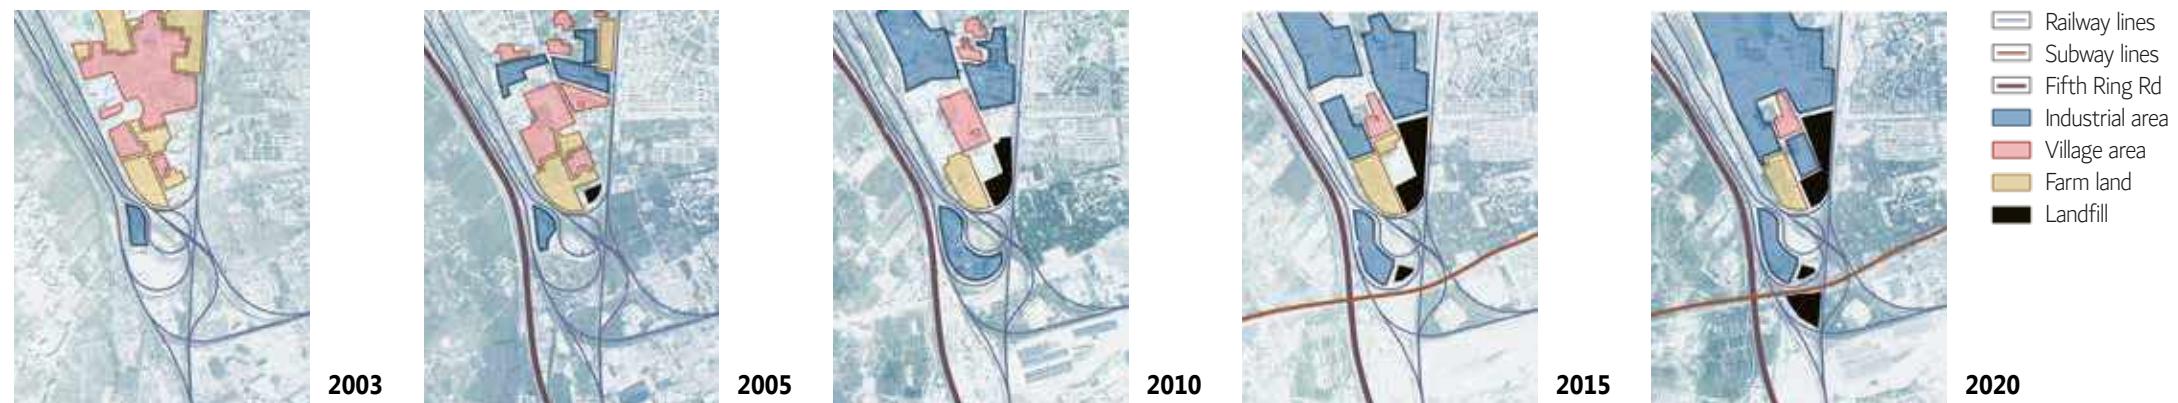

Surrounding Analysis - 1.5 KM Scale

Existing Problems

Evolution Process

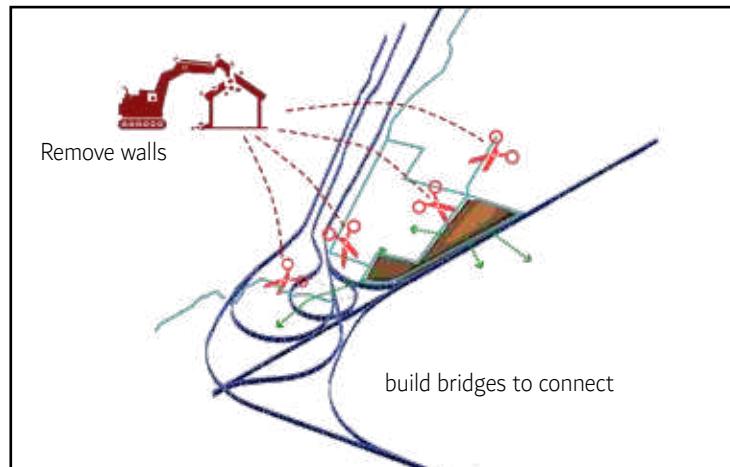

Yonghezhuang Development Timeline

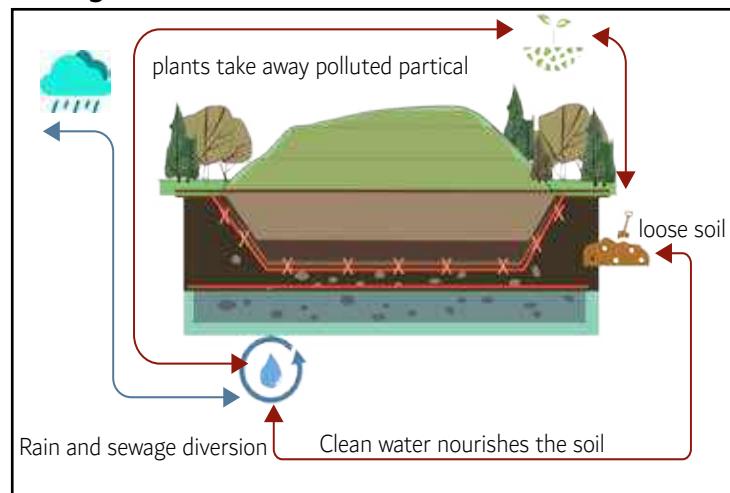

Solutions

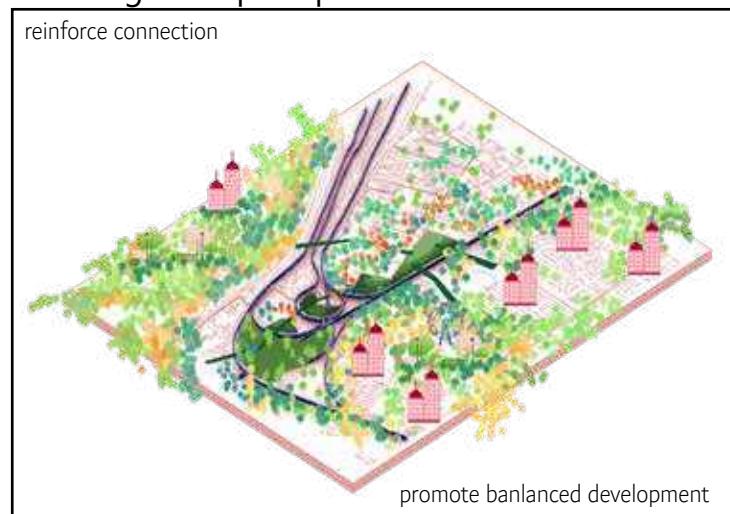

Break barrier & Add more connection

Ecological restoration

Turn to green open space with functions

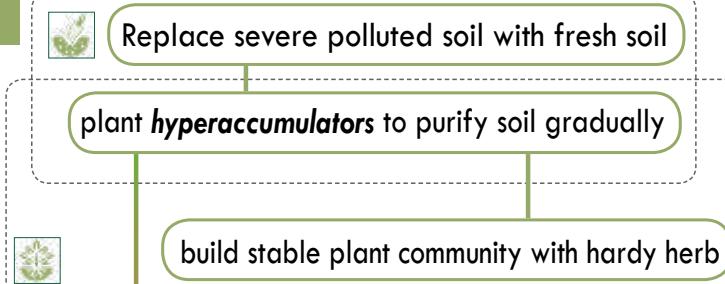

Framework

Landfill Revealing Plan

stage1—5 years

ECOLOGY

soil remediation

phytoremediation

water pollution treatment

collect and classify useful waste

- metal
- glass
- Tyres
- woods
- plastics
- rocks
- fabrication

stage2—10 years

LANDFORM DESIGN

Space design for different slopes

make use of landfill height

Organize drainage direction according to slope

Apply materials into construction

Take advantage of the height, add funny space

organize exhibition spaces, increase environmental awareness

build bridges work as green corridor

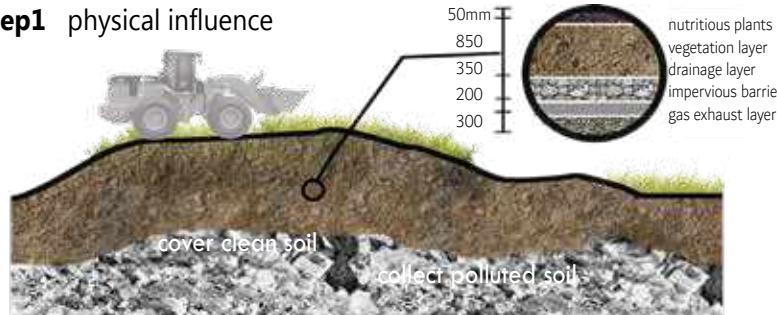

stage3—15 years

SOCIAL CONNECTION & ENTERTAINMENT

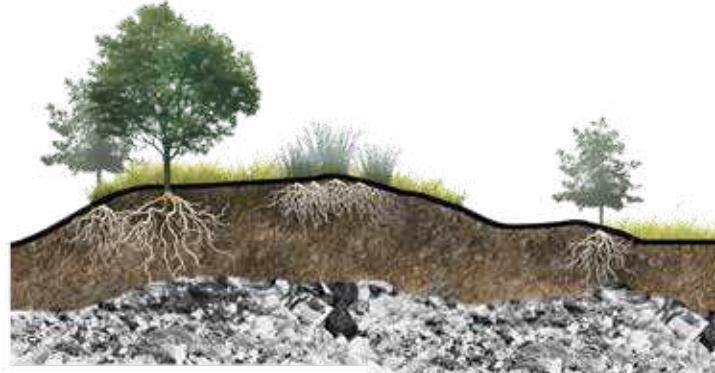

Landfill Memorial Park Born

Soil Remediation Strategy

Step1 physical influence

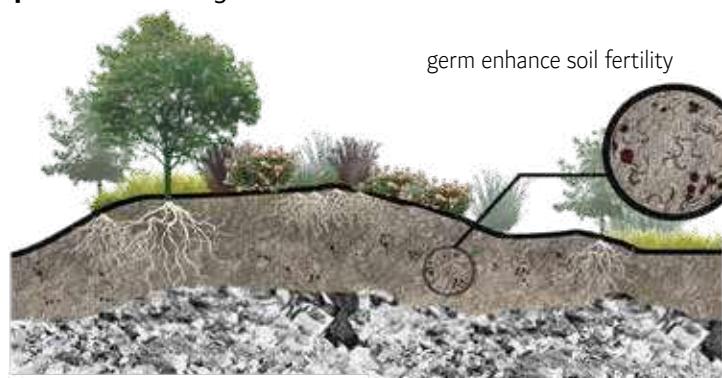

Step2 Plant roots loosen the soil and absorb pollutants

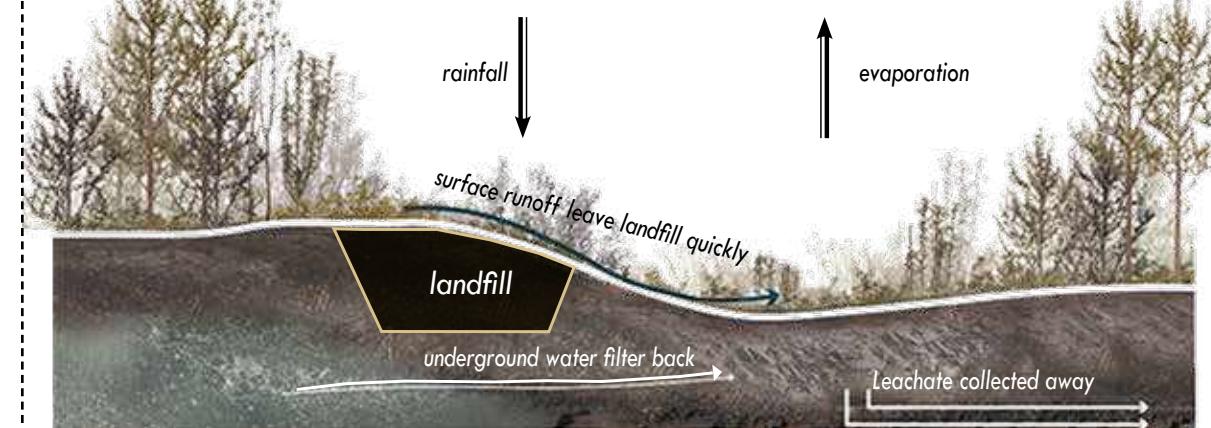

Step3 Chemical Improvement

Step4 Put micro-organisms to absorb harmful substances

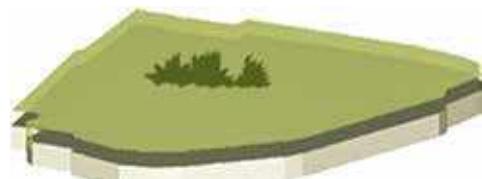

Water Management Strategy

Plant Community Evolution

Step1 Improve soil quality
Introduce pioneer herbs

Step2 Absorb metals by resistant plants

Step3 Stable vegetation restoration

Step4 Improve plant community

Master Plan

03

Urban village reborn

Industrial revitalization of a dying village

*Combining location advantages, transform the dilapidated village
into a furniture distribution center*

Urban Design and Landscape Architectural design

Group work with Fan Yufei

Location:Houqi Village,Beijing

Time:2016.07-2020.10

Instructor: Ding Yufei

Contribution:50%
site analysis,design analysis,birdview drawing

"Urban Villages" in Beijing or other megacities in China has formed an incredible urban scene. On the one hand, it exists to provide necessary spaces for people coming to the city, who have made great contributions for the development of the city. On the other hand, the "village" they are living is becoming an extreme contrast from the modern city they built. The re-development of these villages cannot be only rigid demolishing-rebuilding process. An appropriate re-development always starts from the core: The villagers.

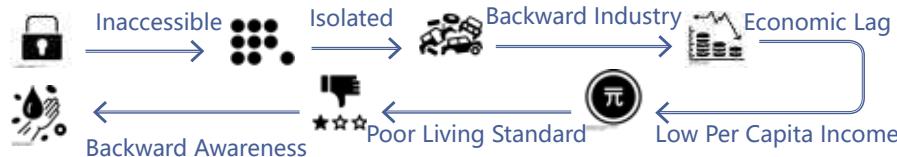

Houqizhuang Urban Village

The village is located in the South fourth Ring east Road, Chaoyang District, Beijing.

It's very convenient for both entering the city and contacting the suburbs.

Backward Economy of Site

Site issues

Suffering from backward industry

The main industry here is vehicle scrapping, causing severe noise and environmental pollution.

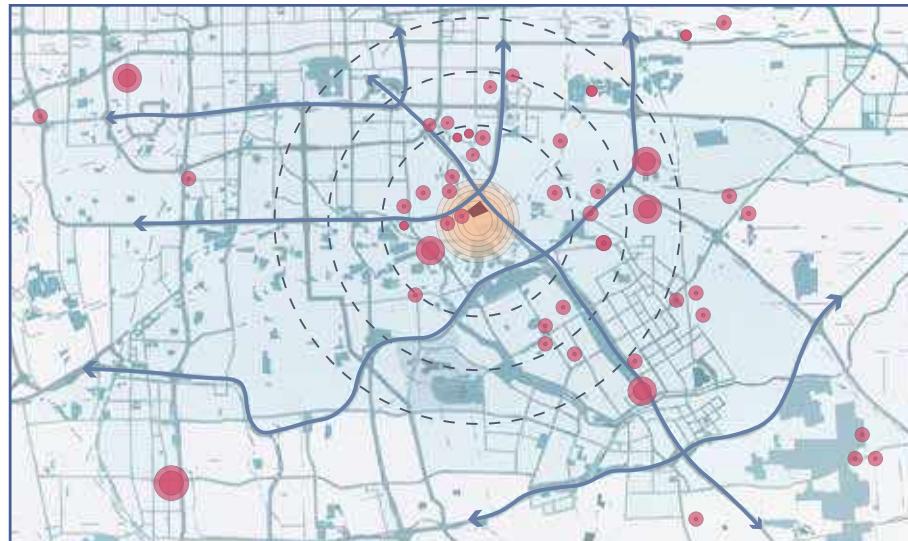

Suffering from severe health problems

Too many anaemic newborn babies are born in village, causing severe health issues.

Logistic Regression Analysis Results of Anemic Infants			
variable	samples	anemia numbers	P value
Maternal Education	22	11 (50%)	0.658
Primary School	120	76 (63.3%)	0.006
Junior High School	120	76 (63.3%)	0.006
Senior High School and above	40	20 (50%)	0.023
MOTHERS' OCCUPATION	234	136 (58.1%)	0.109
Unemployed	35	21 (60%)	0.009
Work in Food Business	35	21 (60%)	0.009
Work in Other Business	162	97 (60.4%)	0.043

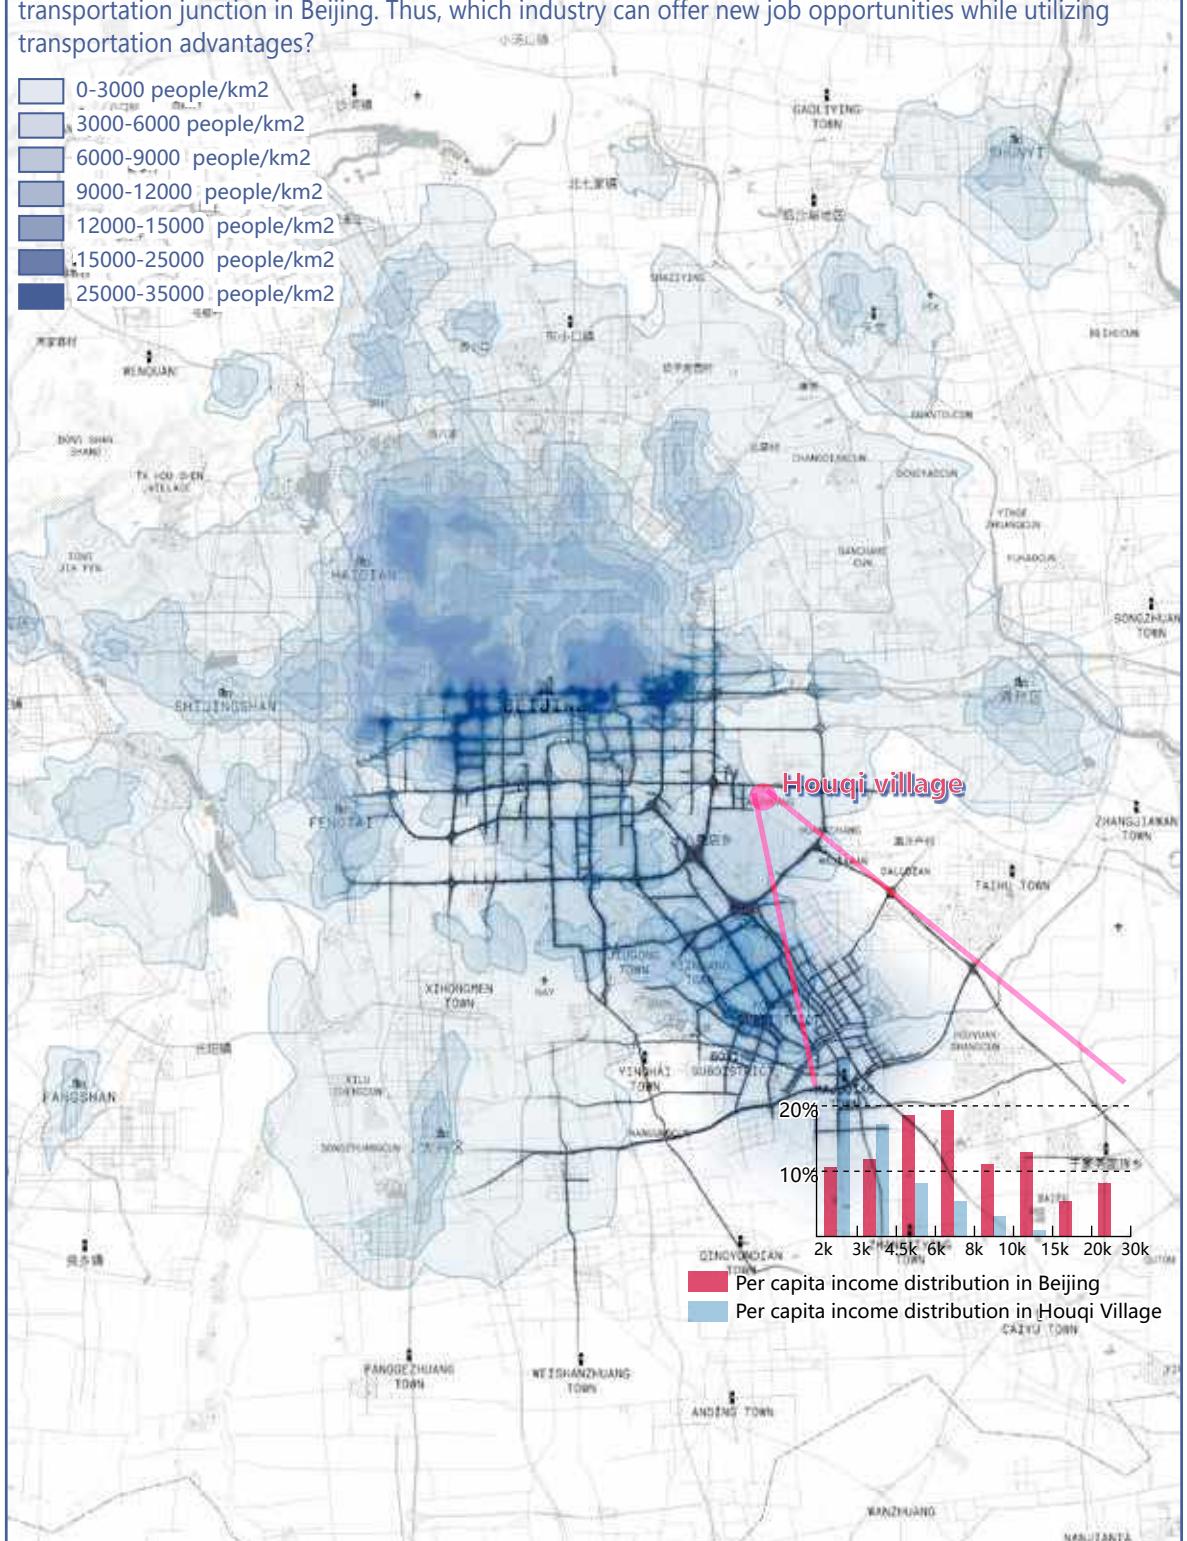

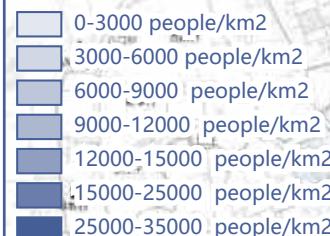

Local Industrial Structure

The site has convenient transportation. Many furniture stores locate around here

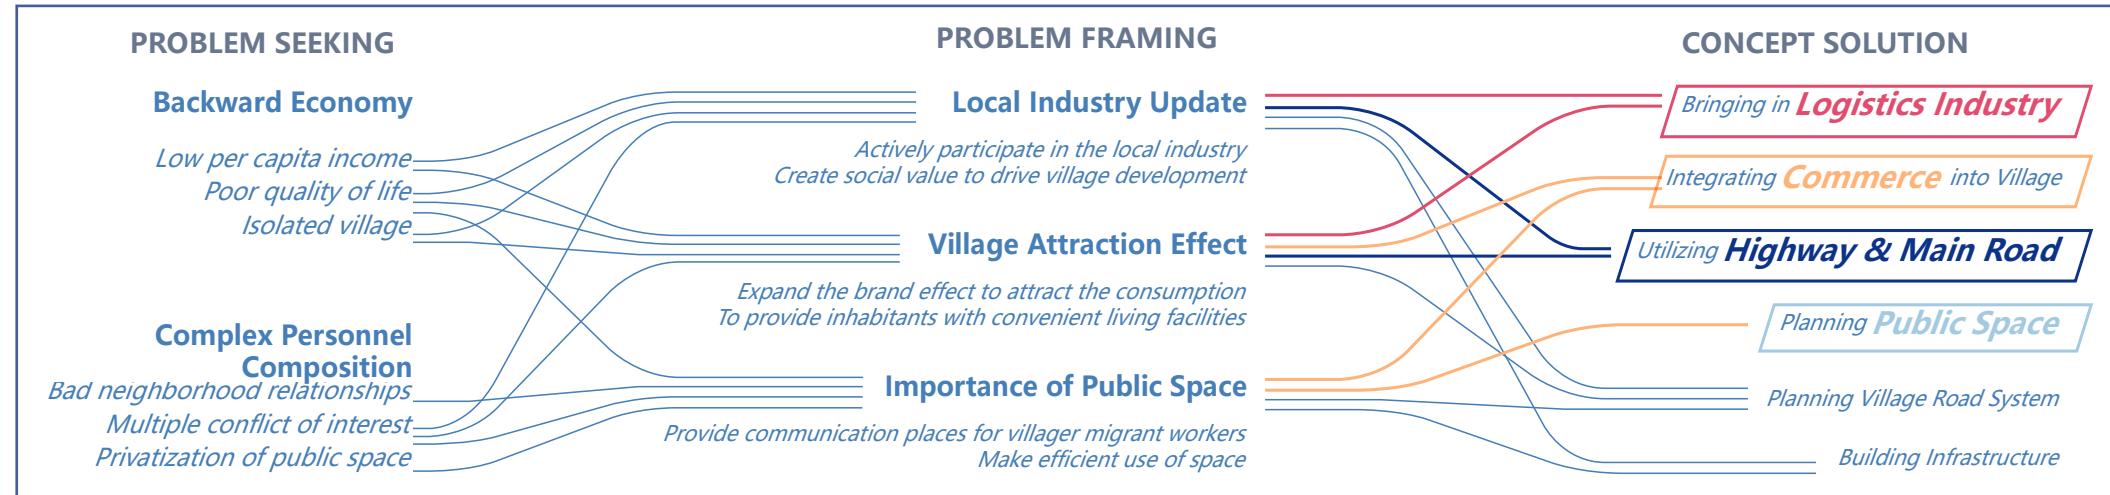

Regional Analysis

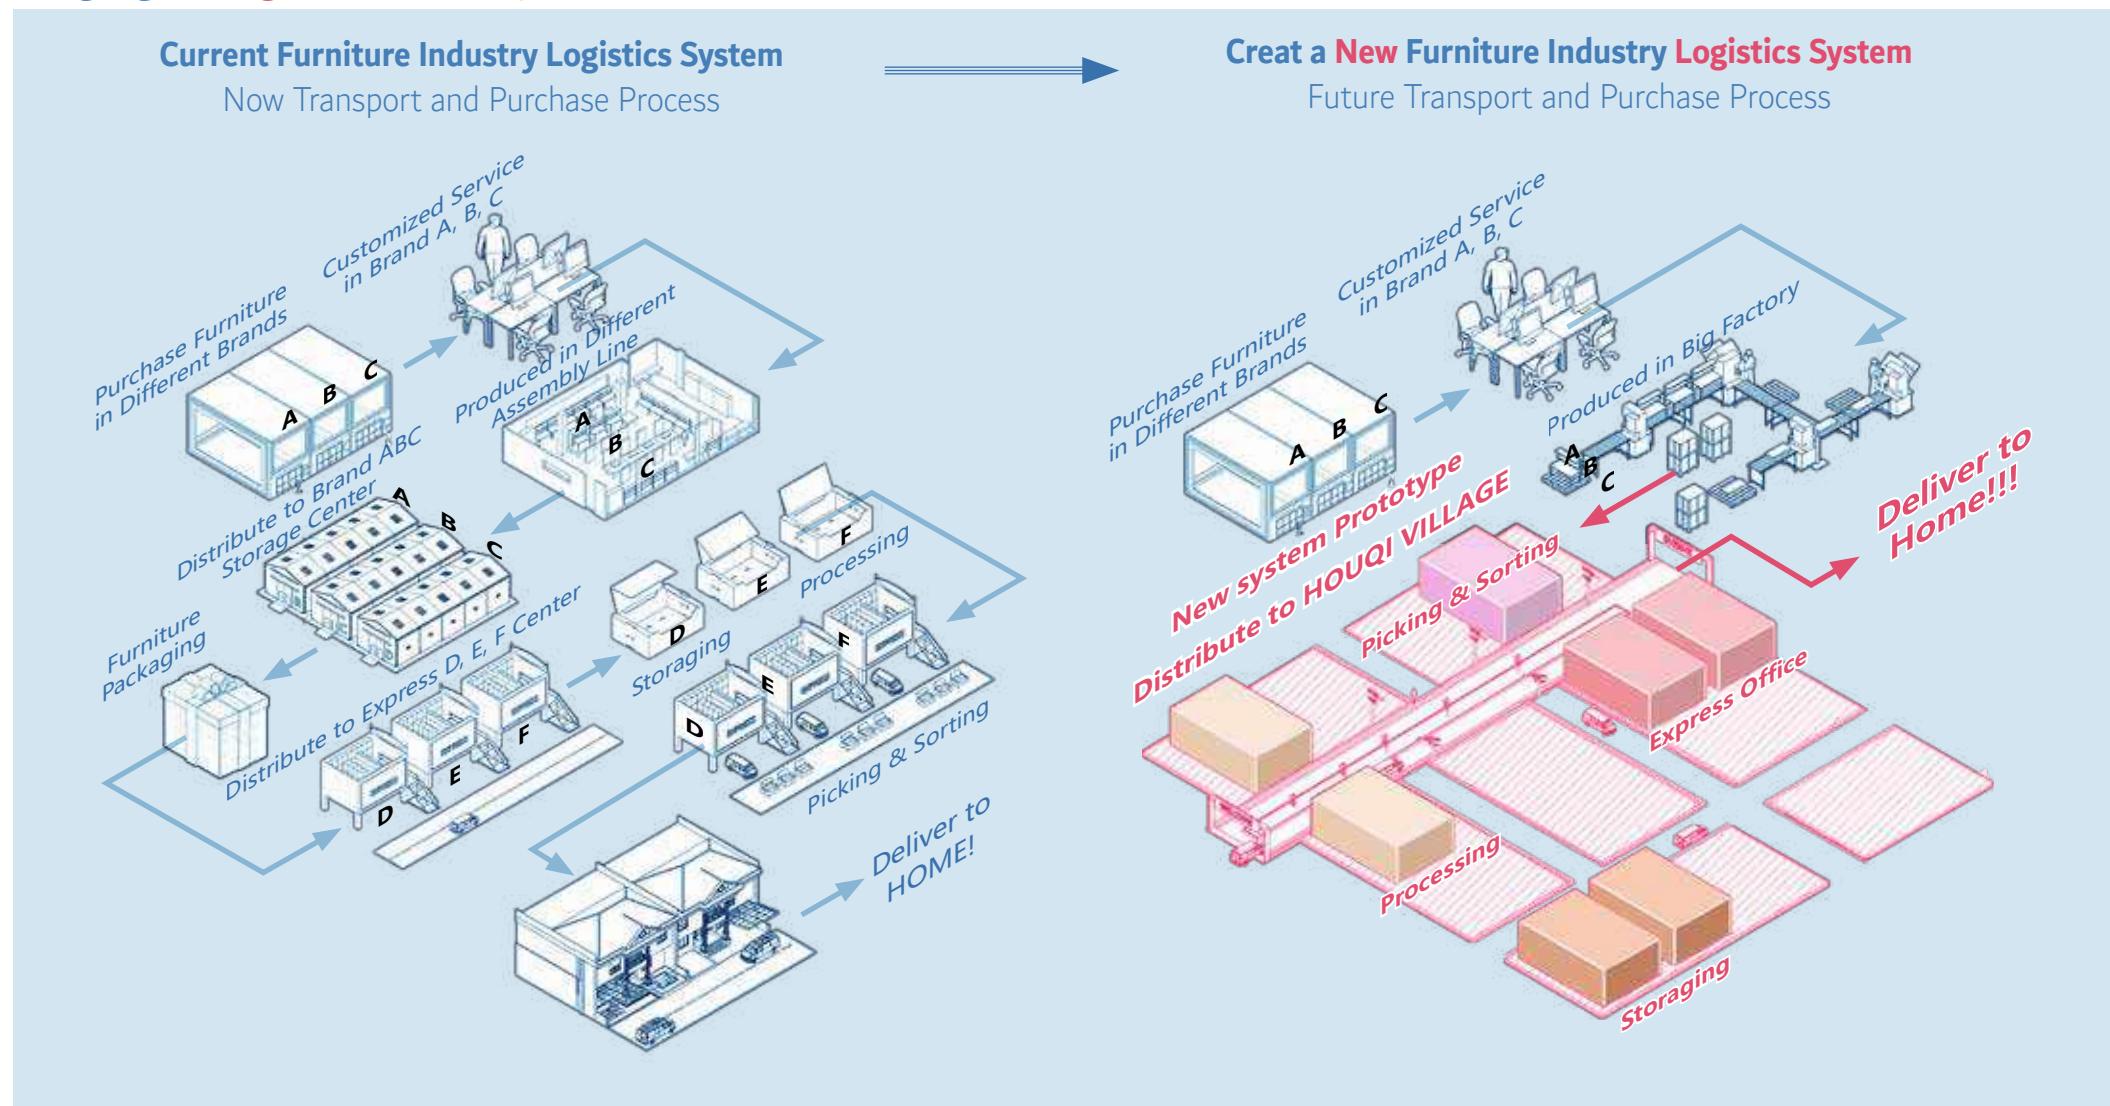

Employment density contour line reveals the employment trend is significantly centralizing, which has inhibited the development of Houqi Village. However, Houqi Village locates in the very place of transportation junction in Beijing. Thus, which industry can offer new job opportunities while utilizing transportation advantages?

System Framework

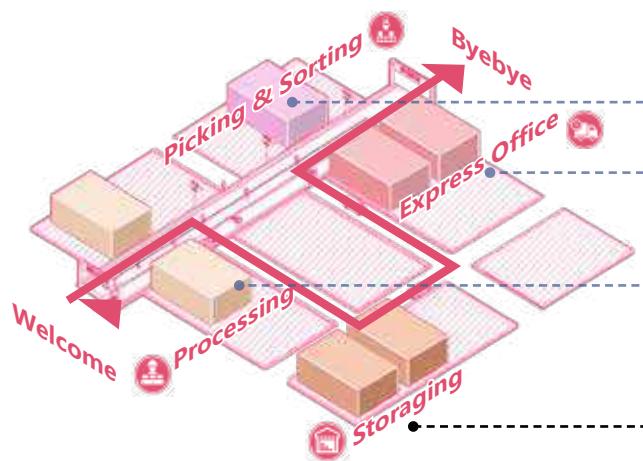

Bringing in Logistics Industry

Bringing in Logistics Industry

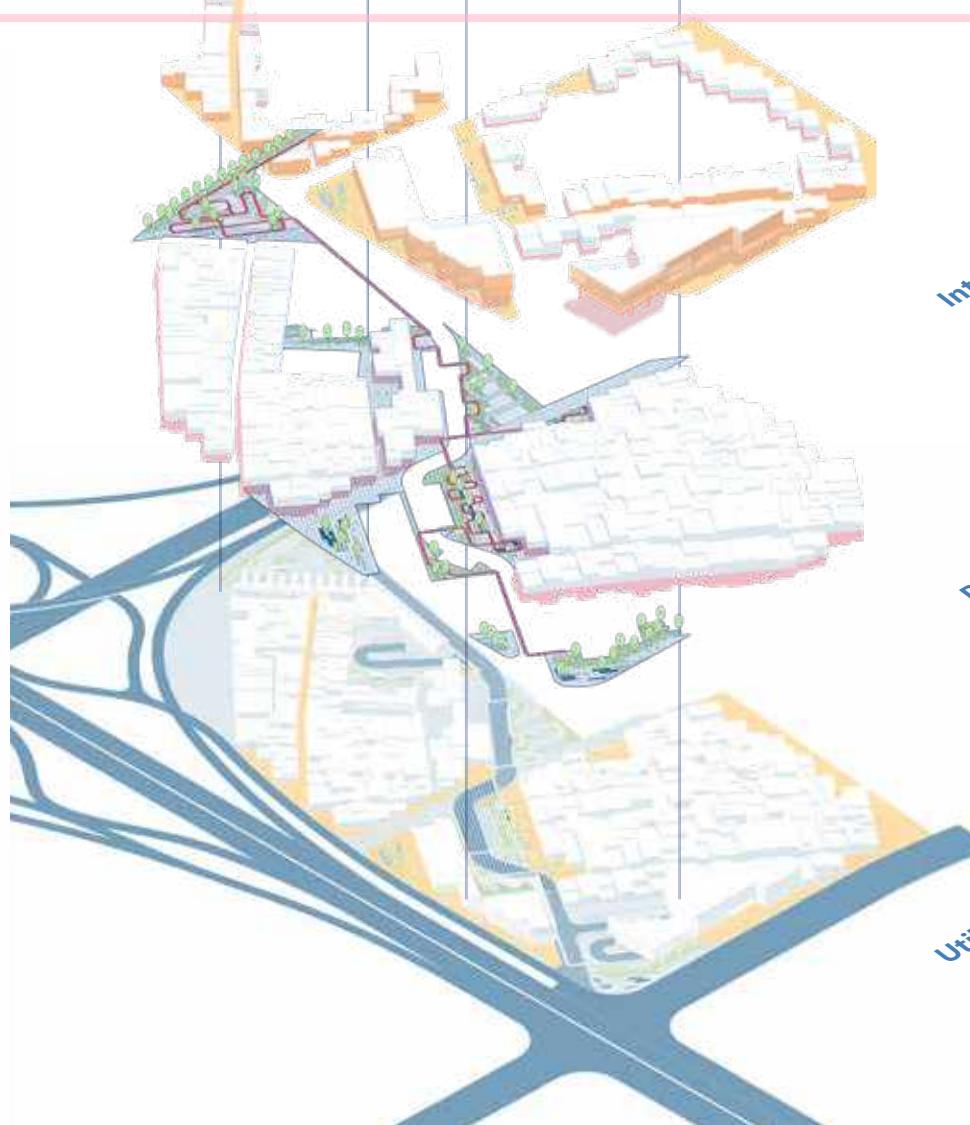

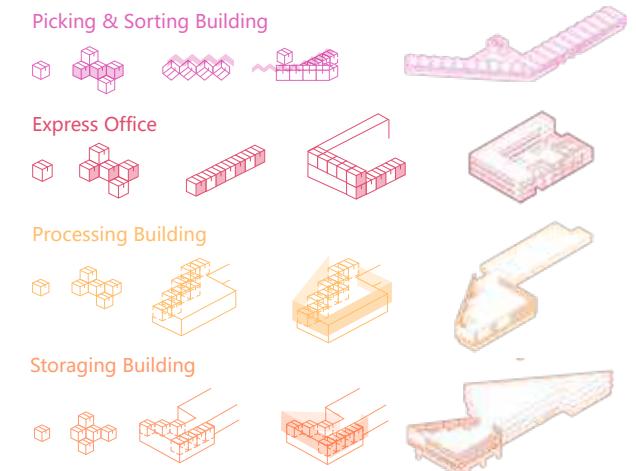

NEW LOGISTICS SYSTEM

CONCRETIZATION

BUILDING ANALYSIS

Integrating Commerce into Village

1. Expand the brand effect to attract the consumption
2. To provide inhabitants with convenient living facilities

Planning Public Space

1. Provide communication places for villager migrant workers
2. Make efficient use of space
3. To provide inhabitants with convenient living facilities

Utilizing Highway & Main Road

1. Create social value to drive village development
2. Expand the brand effect to attract the consumption
3. To provide inhabitants with convenient living facilities

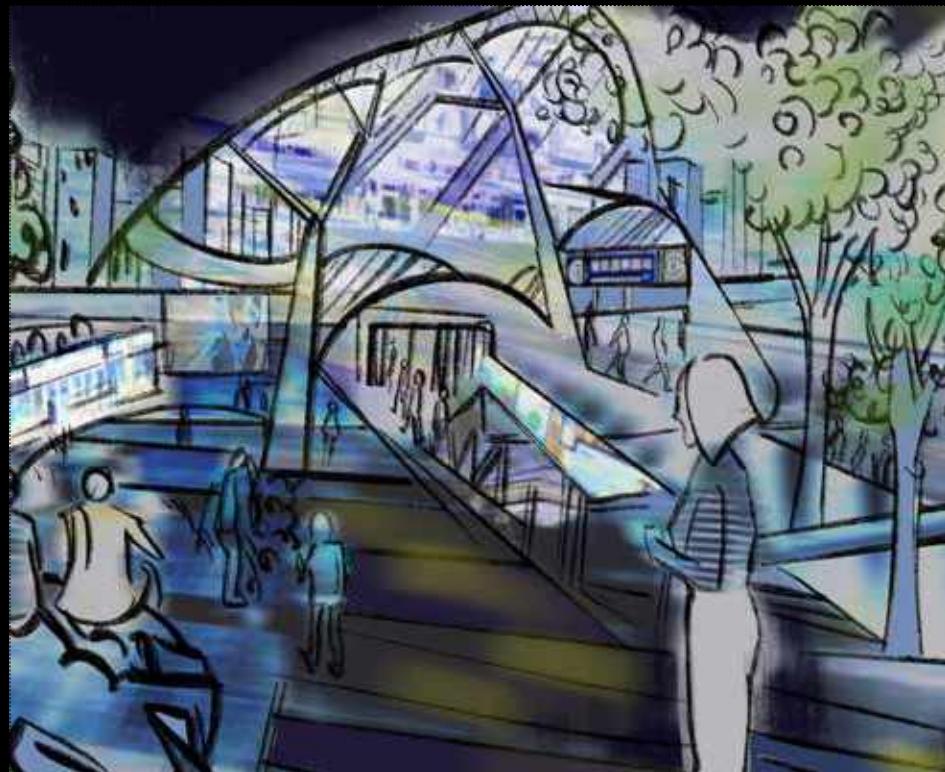

Axonometric Drawing of Houqi Village

Boost Vitality at Night

Deal with the embarrassing situation of unused Shanghai people's park at night

Micro-update of People's Park to improve urban vitality at night

Urban Design and Landscape Architectural design

Group work with Chang Shengran and Li Yi

Location:Renmin Park,Shanghai

Time:2019.08-2020.06

Instructor: Wu Ruohao

Contribution:60%

design concept,mapping,issue analysis,plan,strategy

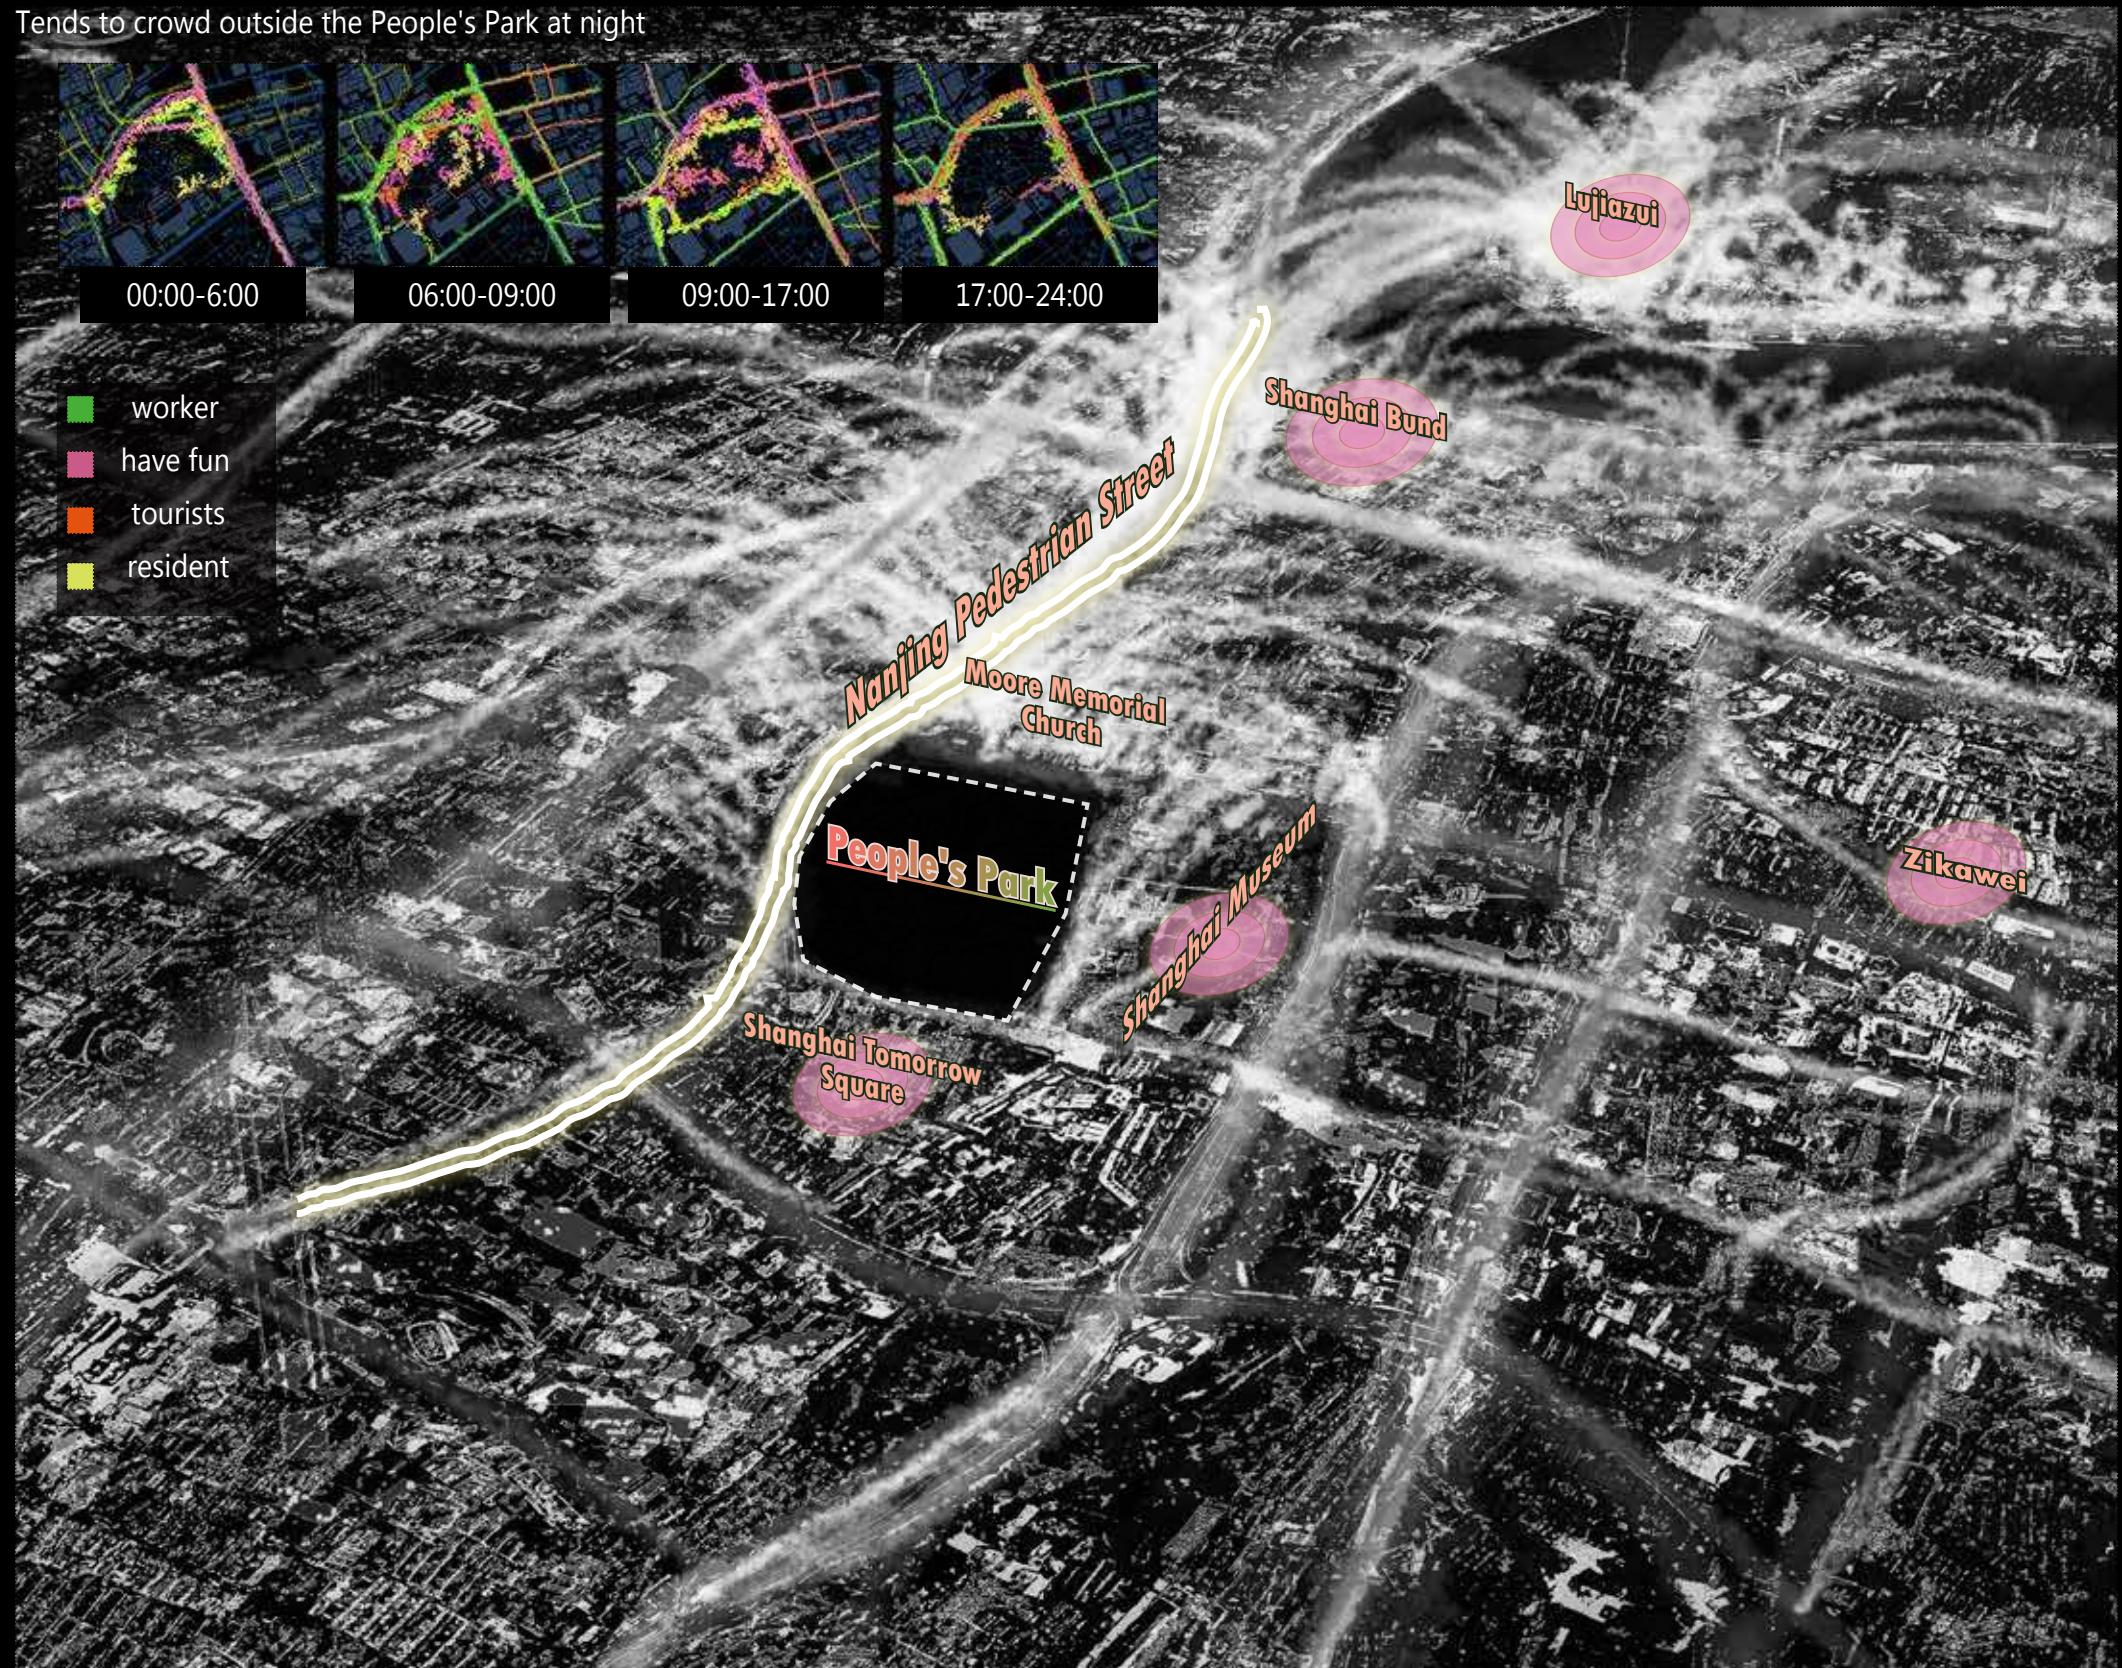

Shanghai People's Park, one of the most popular site, located in the center of Shanghai, is next to Nanjing Road Pedestrian Street. It is surrounded by many ancient architectures and internet-famous shops,which attracts a large number of tourists sightseeing here.

In addition,There are lively blind date activities during the day. However, at night,people are crowded outside the park shopping,dancing,drinking and so on,but the use of the park is low.

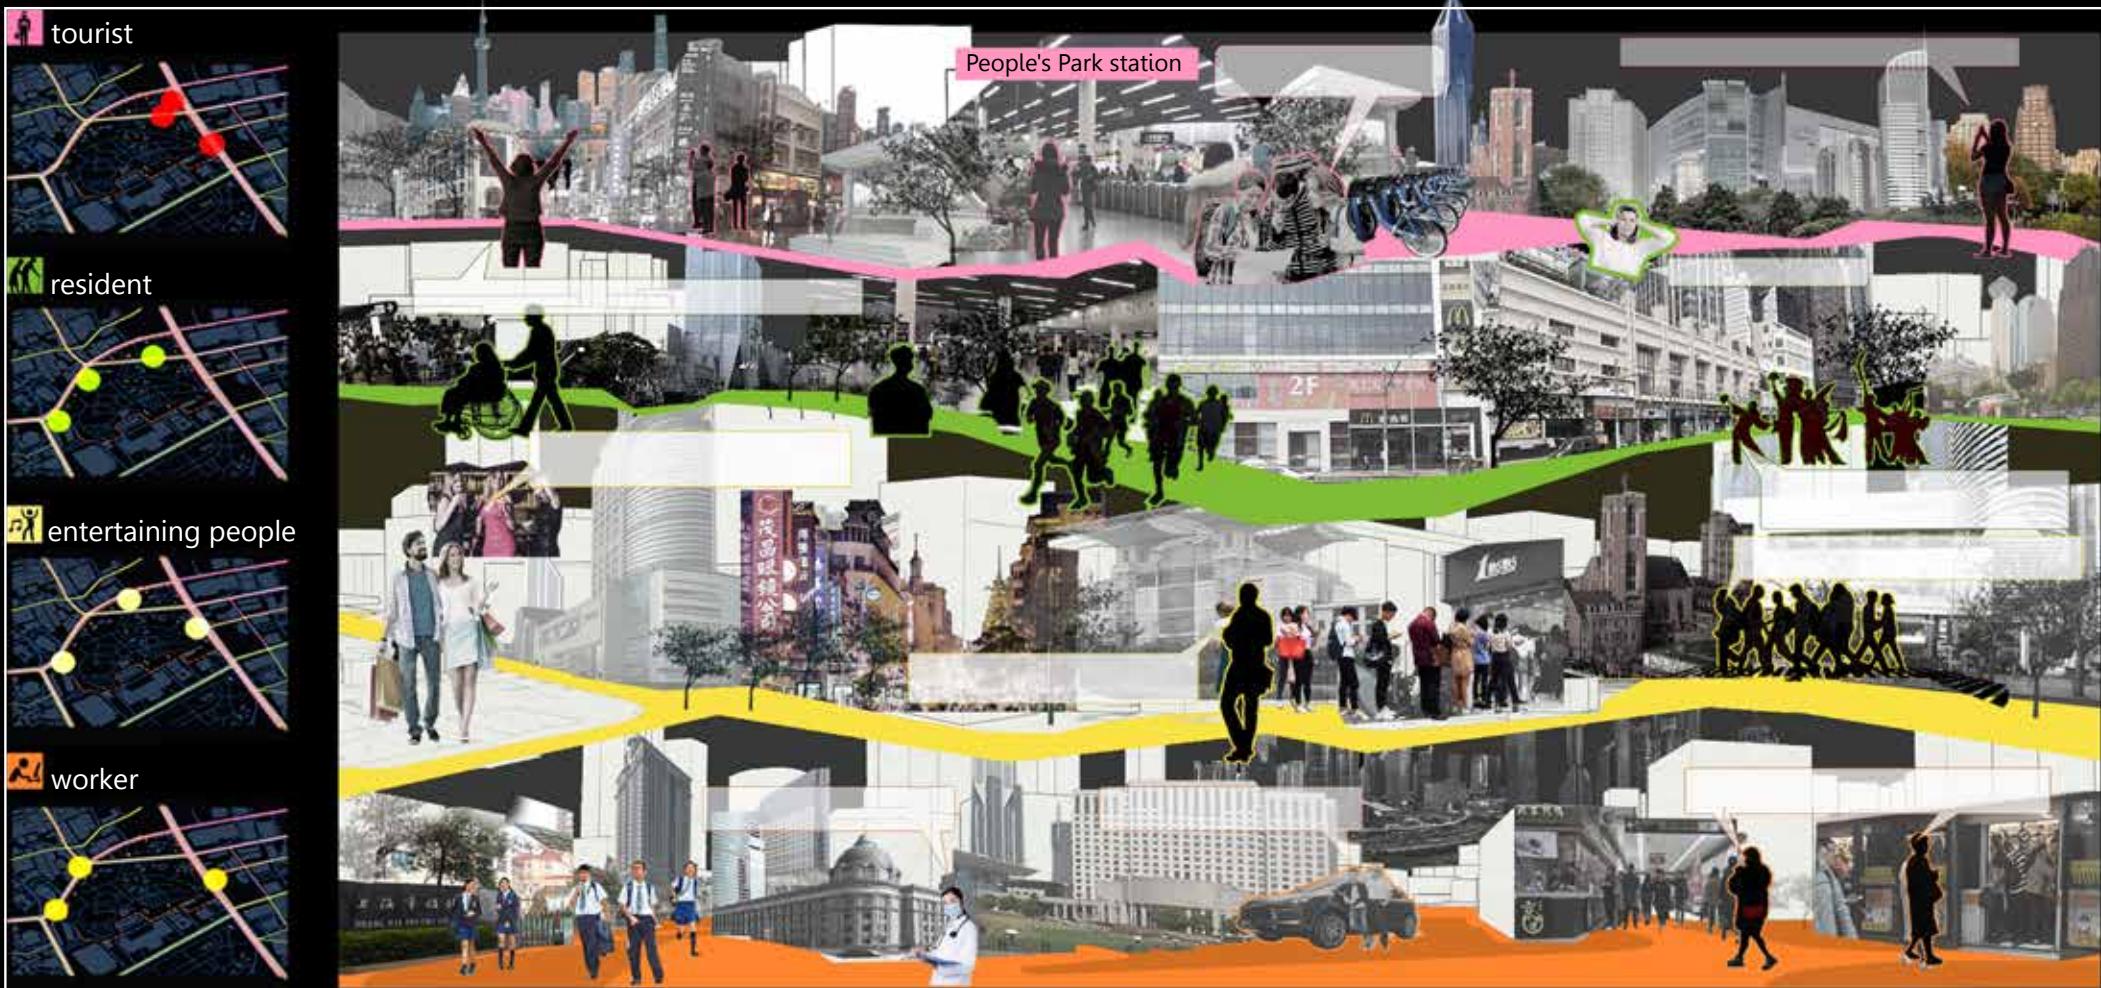

We find out the reason of the low vibrant at night and come up with the idea to boost the nightlife vitality!

Human Flows

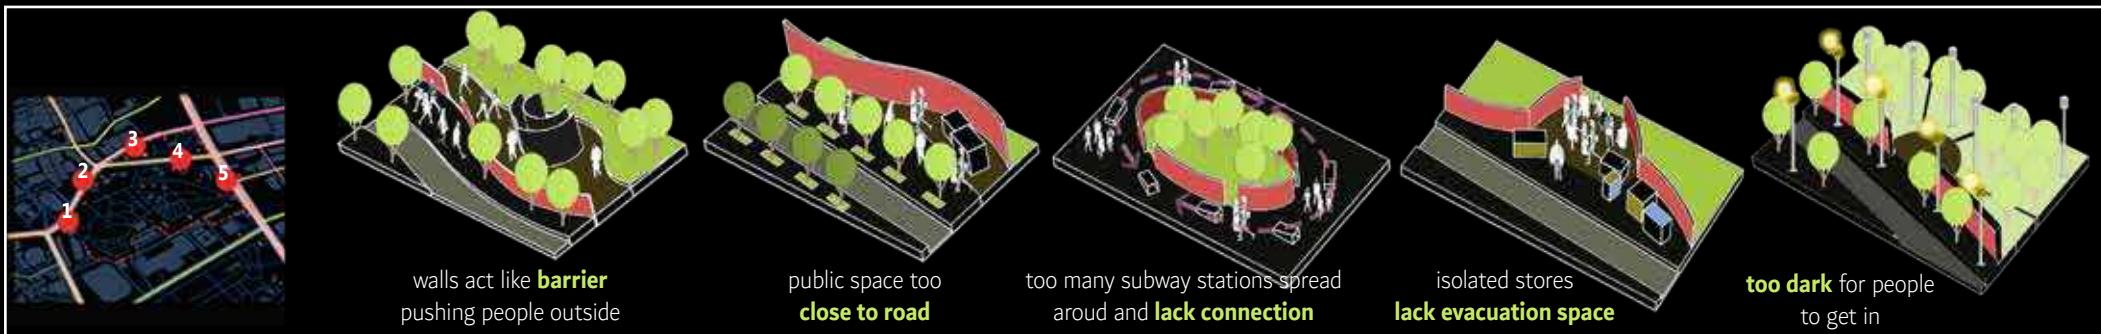

Tends to crowd outside the People's Park at night

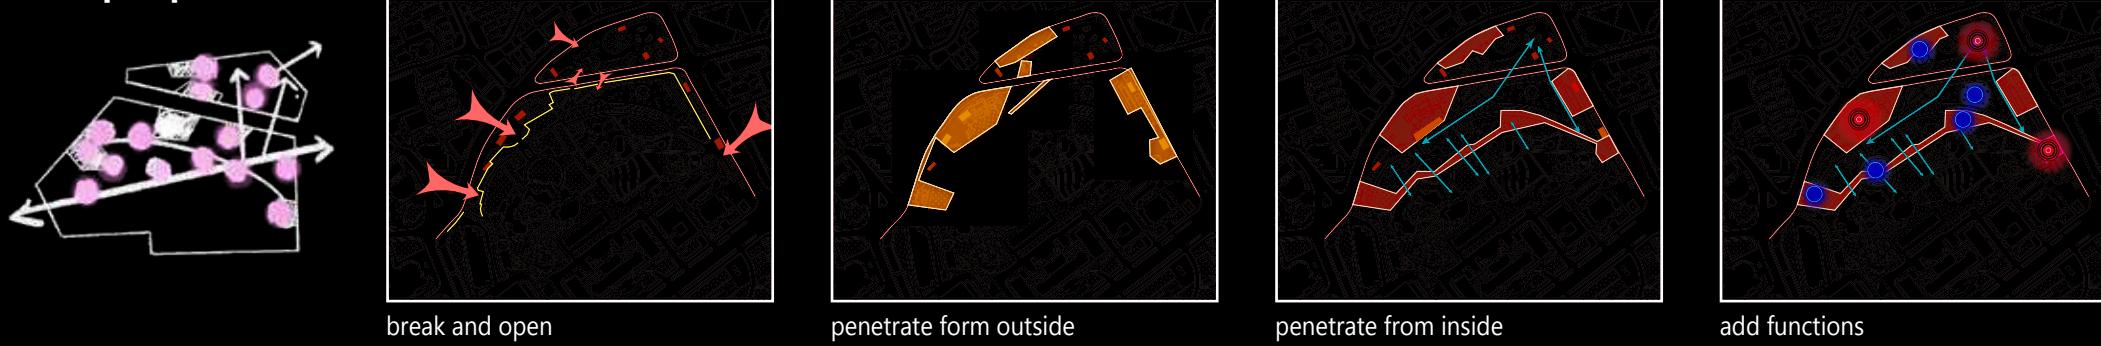

Current Situation Analysis

Problems

Concept: permeable

Master Plan

- | | | |
|---------------------|---------------------------------------------|------------------|
| 1 subway entrance | 2 commercial complex | 3 entrance steps |
| 4 lookout platform | 5 underpass lead to Nanjing Pedestrian Road | |
| 6 shady terrace | 7 outdoor cafe | 8 lawn entrance |
| 9 lighting entrance | 10 starry pool | 11 light square |

Reorganize the subway stations, sum them up into one commercial complex.
Make use of the height difference to build an outdoor cinema.

The commercial street in the complex during the day makes shopping easier and ensures that visitors never lost when they find the entrance of the subway station.

Professional Works

National Forest Village Creation

Shengli Village, Harbin Province

Afforestation and beautification method for wetland conservation village. Through spot-like pits and wetlands, Linear river corridor green space and Planar core wetlands construction, build a better wetland village.

Urban road node landscape design

Chengxian Road, Chengde, HeBei Province

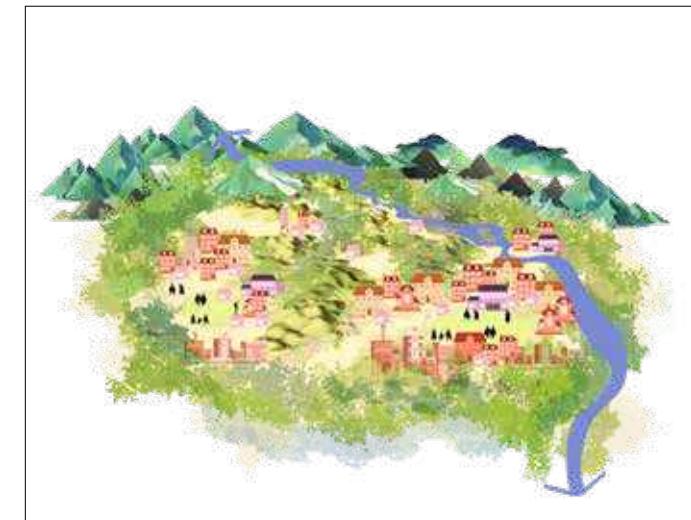

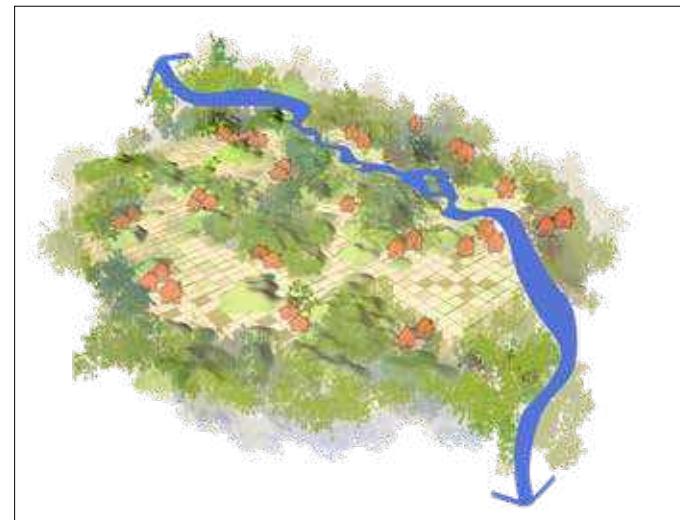

Ecological parking lot design

The strategy and path of ecological restoration

Dongjin district, Chengdu

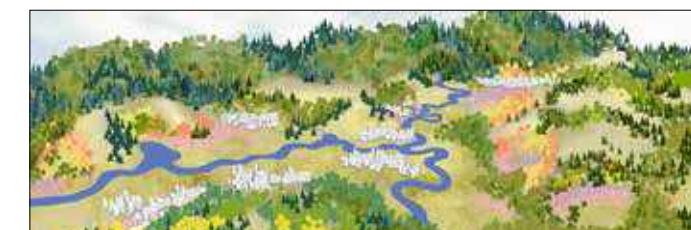

Relying on the characteristics of hills in the city, integrate the hills, villages, urban landscape together.

Integrate the forest, field, water and courtyard in the whole area
create a multi-dimensional landscape display system.

Combining terrain topography to create a number of specialized parks.

Through a number of city green corridors

Laizhou Greenway planning

Laizhou, Yantai, Shandong Province

scenic greenway plan

current scenic spots mapping

ecological greenway plan

current reservoir/river/ mountain mapping

sports greenway plan

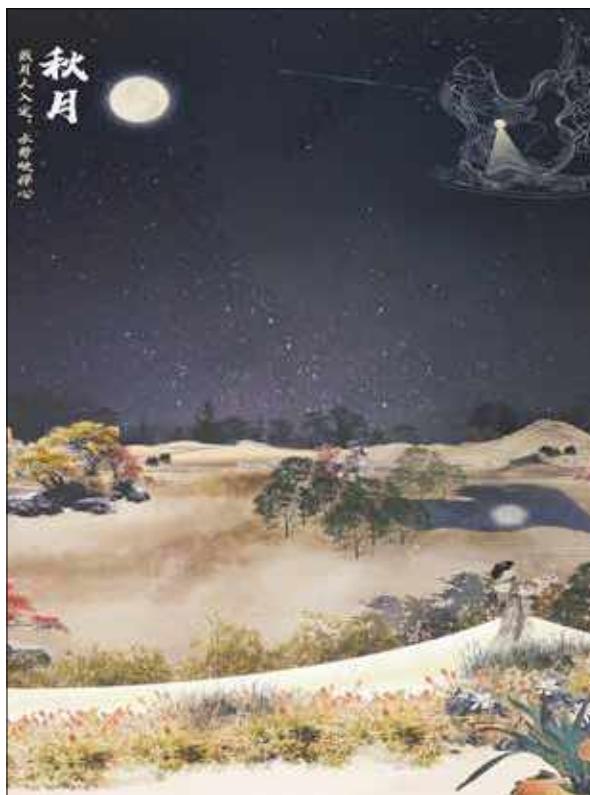

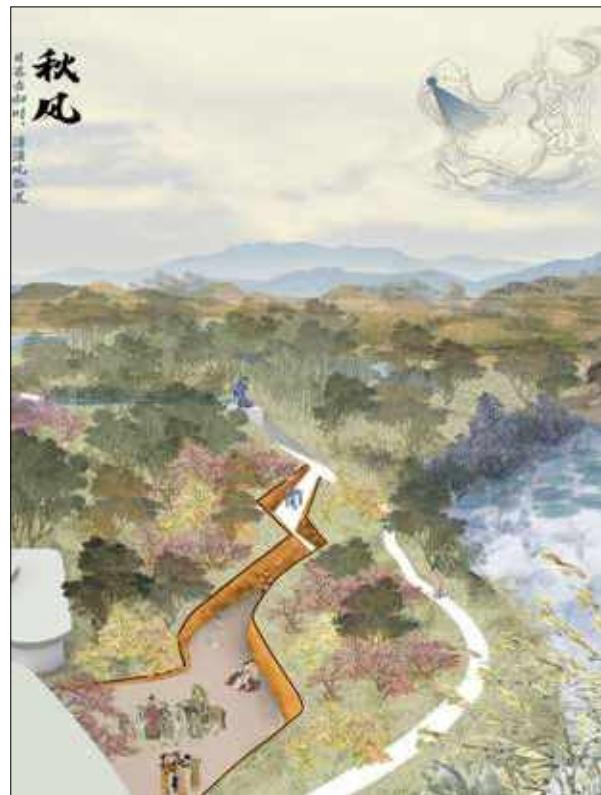

current sporting and entertaining site mapping

Other Works

Four Periods of a day in autumn

Interpret timing into Landscape Node Design.

Won the second prize of CHLSA Design Competition

Agricultural Country Park

Postgraduate graduation design

Agricultural Country Park

Postgraduate graduation design

Other Works

Paintings

- 1 2 Charcoal Drawing Architecture and Landscape
- 3 4 Watercolor lead painting
- 5 Watercolor painting
